授 業 概 要

COURSE SYLLABUS

東北大学理学部

Faculty of Science
Tohoku University

Course	Semester/Credits	Instructor	Affiliation
Introduction to Basic Chemistry (基礎化学序論)	2 Semester 2 Credits	稲葉　謙次 Kenji INABA	Laboratory of Structual Biology

Course code/number : SCH-OCH201E

Course Title : Introduction to Basic Chemistry

Purpose/Abstract :

This class is offered to freshmen enrolled in the AMC course. Fundamental knowledge and cutting-edge research in chemistry and materials science will be presented in the form of seminars in each laboratory. Throughout these seminars, the differences in high school-level and college-level chemistry will be emphasized, and students will be given motivation for their future studies.

Goal :

To gain an understanding of the basic fields of university-level chemistry spread over a cross-section of each field, such as organic chemistry, inorganic chemistry, analytical chemistry, biochemistry and physical chemistry.

Contents :

Following the schedule distributed during the initial class, students will visit laboratories to attend seminars and be introduced to laboratory facilities and learn the importance of basic chemistry as well as cutting-edge research.

Books required/referenced :

Indicated by each instructor

Preparation and review :

Grading :

Class attendance and reports

Remarks :

Course	Semester/Credits	Instructor	Affiliation
Special Class in Basic Chemistry Ⅰ (専門基礎化学Ⅰ)	3 Semester 2 Credits	上田　潔 Kiyoshi UEDA 奥西　みさき Misaki OKUNISHI	Institute of Multidisciplinary Research for Advanced Materials Laboratory of Electron and Molecular Dynamics

Course code/number : SCH-PCH211E

Course Title : Special Class in Basic Chemistry Ⅰ

Purpose/Abstract :

In this lecture, we try to understand fundamentals of the quantum mechanics and quantum chemistry that are required for advanced chemistry courses. Starting with a lecture of the early quantum mechanics, we learn how to formulate the Schrödinger equation, which is the basic equation of quantum mechanics. The basic concept of wavefunctions (= solutions of the Schrödinger equations) are presented to understand the wave nature of particles in atomic scale. Then the simple models for vibrational and rotational motions of molecules, and the electronic state of the hydrogen atom are treated quantum mechanically as the prototypes for more complex atoms and molecules.

Goal :

Gain the skill to solve simple Schrödinger equations and a problem of a particle in a box. Extend it to solve quantum mechanical problems of the harmonic oscillator and the rigid rotator of diatomic molecules, and the electronic motion of the hydrogen atom.

Contents :

We will cover the following themes.

1. Outline and introduction to elementally physical chemistry
2. Dawn of the quantum theory
3. The classical wave equation
4. The Schrödinger equation
5. A particle in a box
6. General Principles of quantum mechanics
7. The harmonic oscillator and the rigid rotator
8. The hydrogen atom

Books required/referenced :

Textbook: Physical Chemistry - a molecular approach by D.A.McQuarrie and J.D.Simon

Preparation and review :

Grading :

Attendance + Mid - term exam. + Final exam. (Additional exam)

Remarks :

Course	Semester/Credits	Instructor	Affiliation
Special Class in Basic Chemistry Ⅱ (専門基礎化学Ⅱ)	3 Semester 2 Credits	BREEDLOVE BRIAN	Laboratory of Coordination Chemistry

Course code/number：SCH-INO211E

Course Title：Basic Chemistry Ⅱ (AMC)

Purpose/Abstract：

This course builds from the basic electronic structure of atoms and molecules to bonding in compounds to structure and finally to the relationship between the structure and properties of compounds.It is my aim that students will develop tools needed to predict the properties from the electronic and physical structures of relatively simple compounds.

Goal：

The goal of this course is to learn the basics of electronic structures of atoms and molecules and bonding. In addition, students will be able to understand the relationship among those topics and the properties of compounds.

Contents：

Below is a tentative schedule and content for the course. The schedule may be changed due to time constraints or at the discretion of the professor.

1. Elemental Origin and Atomic Composition
2. Quantum Mechanics,
3. Periodic Table General Properties and Periodicity, Magnetic Properties
4. Covalent Bonding, Lewis Structure, Molecular Orbital Method
5. Atoms, Molecule, polyatomic molecules
6. Valence bonding method, hybrid orbital, π bond
7. Molecular structure and polarity
8. Symmetry and group theory
9. Group theory molecular orbital, application to molecular vibration
10. Crystal structure (1)
11. Crystal structure (2)
12. Ionic solids
13. Metal and metal like
14. Electric conduction, semiconductor, superconductivity

Books required/referenced：

Primary text: Inorganic Chemistry 5th Ed, by Shriver and Atkins
General Chemistry 9th Ed. by Ebbing and Gammon
and other texts

Preparation and review：

You should be reading the chapters and trying problems not assigned by the professor.

Grading：

Class attendance, homework, and two exams

Remarks：

Contact information: breedlove@m.tohoku.ac.jp
Office: from April, my office will be in the AMC room.

Course	Semester/Credits	Instructor	Affiliation
Special Class in Basic Chemistry Ⅲ (専門基礎化学Ⅲ)	3 Semester 2 Credits	和田　健彦 Takehiko WADA	Laboratory of Nanobio Functional Materials/Chemical Biology & Supramolecular Photochirogenesis

Course code/number：SCH-ORG211E

Course Title：Special Class in Basic Chemistry Ⅲ　専門基礎化学Ⅲ

Purpose/Abstract：

Objective and Summary of Class：

Students will learn how to understand organic chemical reactions. The purpose is to learn the reactions of basic organic compounds, such as alkanes, alkenes, and organic halides, via the flow of electrons shown using arrows.

(1) Structure and Bonding.　(2) Organic Compounds
(3) Stereochemistry　(4) Alkanes
(5) Alkenes　(6) Alkynes

Intended for those students majoring in organic chemistry, this class will provide the broad fundamentals of organic chemistry needed to become a chemist. It is desirable to continue taking Chemistry C, Special Class in Basic Chemistry Ⅲ, and General Organic Chemistry A, B and C as well as to take Exercises in Organic Chemistry A and Organic Chemistry ⅠA and ⅡA (class concerning spectroscopy)

Goal：

- To understand chemical bonds and structure of organic compounds.
- To understand streochemisry.
- To understand the main reactions of alkanes via electron flow arrows.
- To understand the main reactions of alkenes via electron flow arrows.
- To understand the main reactions of alkynes via electron flow arrows.

Contents：

During the class, chapters 1-8 of “Organic Chemistry, 8th ed.” by McMurry will be studied.

Books required/referenced：

“Organic Chemistry 9th ed.” by John McMurry

Preparation and review：

Grading：

Quiz and reports and a final exam. Quizzes will be given at the beginning of classes.

Remarks：

Course	Semester/Credits	Instructor	Affiliation
Special Class in Basic Chemistry Ⅳ (専門基礎化学Ⅳ)	3 Semester 2 Credits	BREEDLOVE BRIAN	Laboratory of Coordination Chemistry

Course code/number : SCH-INO211E

Course Title : Special Class in Basic Chemistry Ⅳ

Purpose/Abstract :

This class will cover general analytical and inorganic chemistry, such as equilibria, acids and bases, acid-base equilibria, oxidation and reduction reactions, electrochemistry, etc.

Goal :

Students will gain an understanding in basic topics in analytical and inorganic chemistries, which will aid them in their future studies.

Contents :

Contents and Schedule:

1. Chemical equilibria
2. Acid and bases
3. Acid-base equilibria
4. Oxidation and reduction
5. Introduction to coordination complexes and solubility
6. Electrochemistry
7. Introduction to symmetry

Books required/referenced :

Shriver and Atkins, Inorganic Chemistry 5th ed.
Ebbing and Gammon, General Chemistry 9th ed.

Preparation and review :

none

Grading :

Attendance and two exams

Remarks :

email: breedlove@m.tohoku.ac.jp

Course	Semester/Credits	Instructor	Affiliation
General Physical Chemistry A (物理化学概論A)	5 Semester 2 Credits	米田　忠弘 Tadahiro KOMEDA	Advanced Scanning Probe Microscopy, IMRAM (Tagen)

Course code/number : SCH-PCH221E

Course Title : Thermodynamics and statistical physics

Purpose/Abstract :

In this course, we study thermodynamics, statistical mechanics, and the properties of many-body systems at finite temperature. The course is intended for the understanding both of chemical physical phenomena appeared in material science. We will cover the classical thermodynamics, the relationship between the macroscopic phenomena and the microscopic properties (statistical mechanics), and the application of these ideas to the observed states of actual materials.

Goal :

Chemical energetics; entropy; work and reversibility; phase equilibria; solution properties; a statistical approach to chemical energetics and equilibria Introduction to quantum chemistry:- applications to the bonding and structure of molecules, materials and nanoparticles. Molecular properties and reactivity

Contents :

The following topics will be discussed, each of which takes two weeks.

Properties of ideal gases
Statistical thermodynamics principles
Statistical thermodynamics principles
Entropy accounting principles
Free-energy functions & the chemical potential
Application to multi-phase systems
Application to solids, surfaces & nanostructures
Fuel cell

Topics like as chemical reaction of fuel cells and spin ordering of magnetic materials are both included.

Books required/referenced :

Hand out materials based on Physical Chemistry - molecular approach by D.A. McQuarrie and J.D. Simon

Preparation and review :

Grading :

Midterm and Final Examination, plus reports of several classes, and the attendance

Remarks :

Course	Semester/Credits	Instructor	Affiliation
General Physical Chemistry B (物理化学概論B)	4 Semester 2 Credits	秋山　公男 Kimio AKIYAMA	Laboratory of Bioinspired Synthetic Chemistry

Course code/number：SCH-PCH222E

Course Title：General Physical Chemistry B

Purpose/Abstract：

The course deals with the introduction to the principles of quantum mechanics and their application to chemical systems. Topics include the formalism and mathematical tools of quantum mechanics; approximate methods; atomic structure; the chemical bond, valence bond; and molecular orbital theory.

Goal：

The aim of this course is that students are able to; (1) understand approximation methods, including the variational method and perturbation theory; (2) explain the atomic structures and their spectroscopic properties; (3) understand the quantum mechanical description of the chemical bond and molecular structures; (4) be familiar with the concept of molecular orbital theory.

Contents：

The contents and schedule are as shown in below:

1) Introduction
2) Approximation method in quantum mechanics: Variational method
3) Approximation method in quantum mechanics: Perturbation theory
4) Structure of the helium atom
5) Multiple electron atoms and the Pauli principle
6) Multiple electron atoms: term symbol and atomic spectra
7) Chemical bond: The hydrogen molecular ion
8) Chemical bond: The molecular orbital method
9) Chemical bond: The structure of diatomic molecules
10) Bonding in polyatomic molecules
11) Hybridization and molecular structure
12) Conjugated pi-electron systems: The Hückel molecular orbital method
13) Computational quantum chemistry

Books required/referenced：

Physical Chemistry - a molecular approach by D.A. McQuarrie and J. D. Simon

Preparation and review：

The session time is limited and therefore self-directed learning is important. Students are required to prepare and review for each class.

Grading：

Students are evaluated on their class attendance, the midterm report and the final examination.

Remarks：

Questions are accepted at any time (after class, in particular).

Course	Semester/Credits	Instructor	Affiliation
General Physical Chemistry C (物理化学概論C)	5 Semester 2 Credits	荒木　保幸 Yasuyuki ARAKI	Laboratory of Nanobio Functional Materials/Chemical Biology & Supramolecular Photochirogenesis

Course code/number：SCH-PCH223E

Course Title：General Physical Chemistry C

Purpose/Abstract：

Objective and Summary of Class:

Chemical kinetics, also known as reaction kinetics, is the study of rates of chemical processes.

A study of chemical kinetics includes investigations of how experimental conditions can influence on the speed of a chemical reaction.

In this class, appropriate construction of mathematical models that can describe the characteristics of a chemical reaction will be discussed.

Concept of “order of reaction” and “how to determine order of reaction along with integrated rate laws” are also the most important topics of this class.

Goal：

Goal of Study:

The main goal of this class is to learn the principles of reaction kinetics and catalysis. Topics discussed here include the laws and theories governing reaction rates and mechanisms in gas, condensed phase and at the solid-liquid interface. Modern experimental approaches to study kinetics in complex chemical and biochemical systems and analysis of experimental data will also be learned

Contents：

Contents and Progress Schedule of the Class:

In this class, the contents from Chapter 27 to Chapter 31 of the following textbook will be discussed;

Chapter 27／The Kinetic Theory of Gases
Chapter 28／Chemical Kinetics : Rate Laws
Chapter 29／Chemical Kinetics : Reaction Mechanisms
Chapter 30／Gas-phase Reaction Dynamics
Chapter 31／Solid and Surface Chemistry

Books required/referenced：

Textbook and References:

Physical Chemistry - a molecular approach by D. A. McQuarrie and J.D. Simon

Preparation and review：

Grading：

Record and Evaluation Method:

Class attendance (perfect attendance is 60 points), reports (perfect submission is 20 points) and scores of final examinations (full score is 20 points) are totally evaluated.

Remarks：

Course	Semester/Credits	Instructor	Affiliation
General Physical Chemistry D (物理化学概論D)	5 Semester 2 Credits	髙岡　毅 Takeshi TAKAOKA	Laboratory of Advanced Scanning Probe Microscopy

Course code/number : SCH-PCH224E

Course Title : General Physical Chemistry D

Purpose/Abstract :

Starting from a lecture of the basic of group theory and spectroscopy, we try to survey modem spectroscopic methods used in the field of physical chemistry.

Goal :

Gain the skill for the analysis of molecules, focusing on the understanding and application to the spectroscopic methods. We cover wide area of the spectroscopic methods, including optical absorprion/emission spectroscopy and magnetic resonance spectroscopy.

Contents :

1) group theory
2) molecular spectroscopy
3) magnetic resonance NMR
4) photochemistry, laser spectroscopy

Books required/referenced :

Course code/number : SCH-PCH251E

Course Title : Exercises of problems and topics in physical chemistry A

Purpose/Abstract :

Through lectures of physical chemistry classes, fundamentals of physical and mathematical knowledge will be lectured. However, it is also necessary to solve actual problems in physical chemistry issues. Topics and exercises in special cases will be extended.

Goal :

In this course, we try to solve problems related to the issues discussed in AMC courses. The goal of this class is to require skills through these process.

Contents :

Part of this class will go along with ‘Problems ands solutions to accompany Physical Chemistry - molecular approach by D.A. McQuarrie and J.D. Simon’ in which the problems shown in each chapter of the text book are analyzed.

Books required/referenced :

Indicated by each instructor.

Preparation and review :

Course	Semester/Credits	Instructor	Affiliation
General Inorganic and Analytical Chemistry A (無機分析化学概論A)	4 Semester 2 Credits	宇田　聡 Satoshi UDA	Laboratory of Crystal Chemistry

Course code/number：SCH-INO221E

Course Title：General Inorganic and Analytical Chemistry A　無機分析化学概論A

Purpose/Abstract：

Thermodynamics is a powerful tool to understand the equilibrium phase relationship that is needed for materials processing including materials synthesis and growth from the conventional to the most advanced one. It also gives an insight of the nonequilibrium process in terms of the deviation from the equilibrium state. It should be also noted that thermodynamics is a powerful mean to prove your developing theory.

Although thermodynamics is one of the classic academics, it is not easy to learn. This is because the 'practical state' is often far different from the 'ideal' and only ideal-gas case with mathematical expressions are simply demonstrated in teaching without showing its applications to the 'real world'. In this class, students will have an exciting learning experience of the thermodynamics through its practical applications with simple math forms. In addition, this class is linked to the 'Exercises in Inorganic and Analytical Chemistry A' and students will learn about the practical use of thermodynamics by solving a few kinds of problems associated with chemical equilibrium or chemical reactions.

Goal：

・To learn 1st law and 2nd law of Thermodynamics.
・To learn different kinds of free energy and how they are related by the Legendre transformation.
・To learn the basic concepts of Gibbs free energy, partial molar quantity.
・To learn the derivation of chemical potentials to understand the phase relationship.
・To learn how to read equilibrium phase diagrams.
・To get the idea how to apply the thermodynamics to phase equlibria and reaction process in materials synthesis and growth process.

Contents：

Ⅰ. Scope of Thermodynamics
Ⅱ. 1st law and 2nd law of Thermodynamics
Ⅲ. Equilibrium
Ⅳ. Chemical Potentials and Activities
Ⅴ. Phase Diagrams
Ⅵ. The Kinetics of Phase Transformations

Books required/referenced：

Handout will be given before the class begins.

Preparation and review：

Assignments will be given.

Grading：

The results of class attendance, quizes and examination will be used for evaluation.

General Inorganic and Analytical Chemistry B (無機分析化学概論B)	4 Semester 2 Credits	BREEDLOVE BRIAN	Laboratory of Coordination Chemistry

Course code/number : SCH-INO222E

Course Title : General Inorganic and Analytical Chemistry B

Purpose/Abstract :

This class is a survey of the general properties and reactivity of main group elements and transition metals. During the course, we cover chapters 9-22 in Shriver and Atkins' Inorganic Chemistry, 5th ed.

Goal :

The goal of this class is to learn the general trends in reactivity of the chemical elements.

Contents :

Contents and Schedule:

1. Chemistry of main group elements
2. d-Block metals
3. Structure of d-block metal complexes
4. Basics of coordination chemistry

Books required/referenced :

General Inorganic and Analytical Chemistry C (無機分析化学概論C)	5 Semester 2 Credits	BREEDLOVE BRIAN	Laboratory of Coordination Chemistry

Course code/number : SCH-INO223E

Course Title : Introductory Inorganic and Analytical Chemistry C (AMC)

Purpose/Abstract :

The objective of this class is to introduce frontiers of inorganic chemistry. The aim of the class is to show how developments in inorganic chemistry impinges on the other disciplines, such as life science, condensed matter physics, and materials chemistry. We will discuss materials chemistry focusing on solid-state compounds, their structures, and electronic, magnetic, and optical properties. In addition, we will discuss nanomaterials and biosensors and introduce the area of catalysis.

Goal :

Students will gain an understanding of the properties of solid-state materials and nanomaterials and learn about f-block elements. In addition, you will learn basic concepts of catalysis and biosensors.

Contents :

Basic Contents and Schedule:

1. f-block elements
2. Introduction to catalysis
3. Homogeneous catalysis
4. Heterogeneous catalysis
5. Other catalytic systems (e.g., photocatalysis and electrocatalysis)
6. Biological inorganic chemistry
7. Biological inorganic processes
8. Band structures of solids and semiconductors
9. Magnetic properties of solids
10. Electronic properties of solids
11. Optical properties of solids
12. Solid-state and materials chemistry
13. Nanoscience
14. Biosensors

General Inorganic and Analytical Chemistry D (無機分析化学概論D)	6 Semester 2 Credits	火原　彰秀 Akihide HIBARA	Laboratory of Nano-Micro Chemical Analysis

Course code/number：SCH-INO224E

Course Title：General Analytical Chemistry: two-phase equilibrium, electroanalytical chemistry, and instrumental analysis

Purpose/Abstract：

In this course, students will understand various analytical methods based on the fundamental knowledge on analytical chemistry learnt in Special Class in Basic Chemistry Ⅳ.

Goal：

The purpose of this course is to help students explain principles, appratuses, and applications of the analytical methods from the viewpoint of selectivity and sensitivity.

Contents：

This is a lecture-centered course with short quiz and homework report. The contents and schedule are as shon below:

1）Introduction
2）Electrochemistry
3）Potentiometry and coulometry
4）Ion selective electrode and other sensors
5）Two-phase equilibrium and extracrtion
6）Principle of chromatography
7）Partition chromatography
8）Ion chromatography and size exclusion chromatography
9）Review of electroanalytical chemistry, extraction, and chromatography
10）States of atoms
11）Atomic absorption spectroscopy
12）Inductively-coupled plasma optical emission and mass spectroscopies
13）X-ray generation and detection
14）X-ray fluorescence
15）Review of atomic and x-ray spectroscopies

Books required/referenced：

References are handed out at every class.

Preparation and review：

Students are expected to do homework（review）.

Grading：

Quizzes in class, homework reports, and examination(s)

Remarks：

Bring your scientific calculator.

Course Title : Exercises in Inorganic and Analytical Chemistry: From Basic Inorganic Chemistry to Coordination Chemistry and Ligand-Field Theory

Purpose/Abstract :

Conduct exercises in inorganic and analytical chemistry, in particular an area from basic inorganic chemistry to coordination chemistry related to the solid-state molecular chemistry, by explaining their fields.

Goal :

To gain a deeper understanding of the course. And we hope that you may be interested in the field of the solid-state molecular chemistry.

Contents :

Conduct exercises and explanation for the fields.

Books required/referenced :

The problem set will be given at each class hour, but the following texts may be useful for your study:

Shriver & Atkins' Inorganic Chemistry, by P. Atkins et al., Oxford University Press.

D- and F-Block Chemistry, by C. Jones, RSC publisher.

Preparation and review :

Grading :

Evaluation will be performed by your attendance records and results of the exercises.

Course	Semester/Credits	Instructor	Affiliation
General Organic Chemistry A (有機化学概論A)	4 Semester 2 Credits	水上　進 Shin MIZUKAMI	Institute of Multidisciplinary Research for Advanced Materials

Course code/number : SCH-ORG221E

Course Title : General Organic Chemistry A

Purpose/Abstract :

Objective and Summary of Class:

This class is part of organic chemistry classes, including Special Class in Basic Chemistry Ⅲ, and General Organic Chemistry A, C, and D. The lecture covers the following topics:

(1) Basic chemistry of organic halides.
(2) Nucleophilic substitution reactions and reaction theory
(3) Diene and allylic systems
(4) Conjugated and aromatic compounds
(5) Aromatic substitution reactions
(6) Properties of alcohols, phenols, ethers, and thiols.

This class will provide the broad fundamentals of organic chemistry that are essential for students to be a chemist.

Goal :

Goal of Study:

To understand

(1) Properties of alkyl halides and related compounds, synthetic methods, radical reactions, principles of the stability of allyl radicals, the characteristics of Grignard reactions
(2) Reactions of organic compounds, especially the characteristics and reaction mechanisms of nucleophilic substitutions and aliphatic reactions
(3) Stability of conjugated chains, electrophilic reactions, kinetic and thermodynamic control of reactions, and the characteristics of Diels-Alder reactions
(4) Structure of benzene and its derivatives, the principles of aromatic stability, heterocyclic aromatic compounds, the Huckel rule, and electrophilic substitution reactions
(5) Chemical properties and reactivity of alcohols, phenols, epoxides, and thiols

Contents :

Contents:

The class will involve chapters 10, 11, and 14-18 of Organic Chemistry 9th Ed. by John McMurry. However, the parts in chapter 14 covering spectroscopy will be omitted.

1. Introduction
2. Organohalides (Chapter 10)
3. Nucleophilic substitutions and eliminations (Chapter 11)
4. Conjugated compounds (Chapter 14)
5. Benzene and aromaticity (Chapters 15)
6. Electrophilic aromatic substitution (Chapter 16)
7. Alcohols and phenols (Chapter 17)
8. Ethers and epoxides; Thiols and Sulfides (Chapter 18)

Books required/referenced :

McMurry Organic Chemistry 9th Ed.

Preparation and review :

Grading :

Grading:

Evaluation will be performed on the basis of exams, class participation, and homework results.

Course Title : Chemistry of Carbonyl Compounds and Carboxylic Acids Derivatives

Purpose/Abstract :

Carbonyl compounds and derivatives of carboxylic acids are among the most important compound classes in organic chemistry. Their high reactivity and multitude of possible transformations make them useful precursors in organic synthesis. On the other hand, multi-step transformations like condensation reactions give the students an opportunity to train their skills in following the mechanisms of these reactions

Goal :

Explain the students variegated chemistry of carbonyl compounds

Contents :

Chapter 19: Aldehydes and Ketones
Chapter 20: Carboxylic Acids and Nitriles
Chapter 21: Carboxylic Acid Derivatives
Chapter 22: Carbonyl Alpha-Substitution Reactions
Chapter 23: Carbonyl Condensation Reactions

Books required/referenced :

McMurry "Organic Chemistry"

Preparation and review :

Homework after each class for creative study

Grading :

Small tests after each class, half-term examination

Remarks :

Course	Semester/Credits	Instructor	Affiliation
General Organic Chemistry D (有機化学概論D)	5 Semester 2 Credits	永次　史 Fumi NAGATSUGI	Institute of Multidisciplinary Research for Advanced Materials

Course code/number : SCH-ORG224E

Course Title : General Organic Chemistry D

Purpose/Abstract :

This class is part of series of organic chemistry classes, including General Organic Chemistry A, C, and D.
This lecture will concersn the following topics:

(1) Basic chemistry of amines and helelocycles
(2) Chemistry of biomolecules
  2-1 Carbohydrates 2-2 Aminoacids, Peptides and Proteins
  2-3 Lipids 2-4 Nucleic acids
(3) The organic chemistry of metabolic pathway
(4) Pericyclic reactions : electrocyclic reactions, cyclo additions and sigmatropic rearrangements

Goal :

Goal of Study

(1) To understand the synthetic method of amines and reactions of amines
(2) To understand the chemical properties and reactivity of heterocyclic amines
(3) To understand the structures and biological functions of biomoecules (carbohydrates, amino acids, peptides, proteins, lipids and nucleic acids
(4) To understand the organic chemistry of metabolic pathway in the cells of living organisms
(5) To understand the peicyclic reacitions by molecular orbital theory

Contents :

The class will involve chapters 24-30 of Organic Chemistry by John McMurry.
1st, 2nd: Amines and heterocycles (Chapter 24)
3d, 4th: Orbitals and organic chemistry: pericyclic reactions (Chapter 30)
5th, 6th: Biomolecules carbohydrates (Chapter 25)
7th, 8th: Biomolecules amino acids, peptides and proteins (Chapter 26)
9th: Midterm examination
10th: Biomolecules lipides (Chapter 27)
11th, 12th: Biomolecules Nucleic acids (Chapter 28)
13th, 14h: The organic Chemistry of metabolic pathways (Chapter 29)
15th: Examination

Books required/referenced :

"Organic Chemistry 9th ed." by John McMurry

Preparation and review :

Grading :

Evaluation will be performed on the basis of exam and the homework results.

Remarks :

Exercises in Organic Chemistry A （有機化学演習Ａ）	4 Semester 1 Credit	永次　史 和田　健彦 水上　進 その他	Institute of Multidisciplinary Research for Advanced Materials

Fumi NAGATSUGI, Takehiko WADA, Shin MIZUKAMI and Other

Course code/number：SCH-ORG251E

Course Title：Exercises in Organic Chemistry A

Purpose/Abstract：

Objective and Summary of Class:

Understanding of organic chemistry will be deepened by performing exercises based on the lecture contents of "Chemistry C" and "Special Class in Basic Chemistry Ⅲ" and in parallel "General Organic Chemistry A" and "Laboratory Experiments in Chemistry A" (up to chapter 18 in McMurry, "Organic Chemistry", 9th ed.)

Goal：

It will be possible to explain basic organic chemistry in real terms. In particular, organic reaction mechanisms can be described with arrows showing the movement of electrons.

Contents：

The problems at the end of each chapter of McMurry's "Organic Chemistry", 9th ed. up to chapter 18 (except Chapter 12-14) will be performed. Details will be explained during the 1st lecture.

Books required/referenced：

McMurry "Organic Chemistry", 8th ed. and 9th ed. References will be introduced accordingly.

Preparation and review：

You should study the exercise in the McMurry's "Organic Chemistry", 9th ed. (chapters 1-18)

Grading：

Evaluation will be based on attendance and the number of exercise answers given. Additional points will be given for answers written on the blackboard.

Remarks：

Course	Semester/Credits	Instructor	Affiliation
Exercises in Organic Chemistry B （有機化学演習Ｂ）	5 Semester 1 Credit	永次　史 和田　健彦 その他	Institute of Multidisciplinary Research for Advanced Materials

Fumi NAGATSUGI, Takehiko WADA and Other

Course code/number：SCH-ORG252E

Course Title：Exercises in Organic Chemistry B

Purpose/Abstract：

Understanding of organic chemistry will be deepened by performing exercises based on the lecture contents of "General Organic Chemistry C" and "General Organic Chemistry D" (from chapter 19 up to chapter 30 in McMurry, "Organic Chemistry", 9th ed.)

Goal：

It will be possible to explain basic organic chemistry in real terms. In particular, organic reaction mechanisms can be described with arrows showing the movement of electrons.

Contents：

The problems at the end of each chapter of McMurry's "Organic Chemistry", 8th ed. (chapters 19-30) will be performed. Details will be explained during the 1st lecture.

Books required/referenced：

McMurry "Organic Chemistry", 9th ed. References will be introduced accordingly.

Preparation and review：

You should study the exercise in the McMurry's "Organic Chemistry", 9th ed. (chapters 19-30).

Grading：

Evaluation will be based on attendance and the number of exercise answers given. Additional points will be given for answers written on the blackboard.

Remarks：

Course	Semester/Credits	Instructor	Affiliation
General Biochemistry （生物化学概論）	3 Semester 2 Credits	稲葉　謙次 Kenji INABA	Laboratory of Biomolecular Structure

Course code/number：SCH-BIC211E

Course Title：General Biochemistry（生物化学概論）

Purpose/Abstract：

To study the basic knowledge of molecular biology, biochemistry and structural biology and to understand biological phenomena at the molecular level, students will learn the following contents.

1）Structures and chemical properties of nucleic acids
2）Structures and chemical properties of amino acids and proteins
3）Biochemical methods for analyzing DNA sequence, amino acid sequence, protein structures and functions
4）Mechanisms of enzyme catalysis

Goal：

Students will gain deep insights into physiological functions of nucleic acids, proteins and other important biomolecules. Also, students will understand mechanisms of operations of several important enzymes.

Contents：

Lectures will follow a textbook indicated below.
Especially, we will learn Chapters 1-9 of the textbook.

Books required/referenced：

Berg, Tymoczko and Stryer, Biochemistry, 7th international edition.

Preparation and review：

Grading：

Attendance, attitude in class and results of examinations will be taken into consideration for grading.

Remarks：

Course	Semester/Credits	Instructor	Affiliation
Biochemistry ⅠA （生物化学ⅠA）	4 Semester 2 Credits	髙橋　聡 Satoshi TAKAHASHI	Laboratory of Biological and Molecular Dynamics

Course code/number：SCH-BIC221E

Course Title：The Molecular Design of Life and Biological Energy Transduction

Purpose/Abstract：

To learn the biological phenomena at the molecular level and to gain a deeper understanding of biochemistry, molecular biology and biophysics.
Students will learn:
1. Structures and properties of sugars and lipids,
2. Structures and properties of biological membranes,
3. Biological energy transduction.

It is desirable to consistently attend the discussions in Biochemistry ⅡA concerning the DNA and RNA synthesis and metabolism of biomolecules.

Goal：

Students will gain an understanding of the functions of sugars, polysaccharides, lipids and membranes on the basis of their structures and thermodynamics. In addition, students will understand the process in which glucose is converted into ATP as energy currency.

Contents：

1st lecture Chap11 Carbohydrates I
2nd lecture Chap11 Carbohydrates Ⅱ
3rd lecture Chap12 Lipids and cell membranes I
4th lecture Chap12 Lipids and cell membranes Ⅱ
5th lecture Chap13 Membrane Channels and Pumps I
6th lecture Chap13 Membrane Channels and Pumps Ⅱ
7th lecture Chap14 Signal Transduction Pathways
8th lecture Chap15 Metabolism: Basic concepts and Design
9th lecture Chap16 Glycolysis and Glugoneogengesis I
10th lecture Chap16 Glycolysis and Glugoneogengesis Ⅱ
11th lecture Chap17 The Citric Acid Cycle
12th lecture Chap18 Oxidative Phospholylation I
13th lecture Chap18 Oxidative Phospholylation Ⅱ
14th lecture Epilogue: Lives of Warburg, Mayerhoff and Krebs

Books required/referenced：

Berg, Tymoczko and Stryer, Biochemistry, 7th international edition (Freeman and Co. NY). The lectures will cover chapters 10 to 18 of the textbook.

Preparation and review：

Students will be asked to submit homework every week.

Grading：

The results of examinations and attendance will be taken into consideration for evaluation.

Remarks：

The contact addresses of Satoshi Takahashi are as follows:
Office: IMRAM, east building 1, room 307 (Katahira Campus).
Office hour: Tuesday from 4:00pm to 6:00pm.
Email: st@tagen.tohoku.ac.jp

Course	Semester/Credits	Instructor	Affiliation
Basic Experiments in Chemistry (基礎化学実験)	6 Semester 1 Credit	豊田　耕三 Kozo TOYODA	Laboratory of Fundamental Chemistry

Course code/number : SCH-OCH251E

Course Title : Laboratory Experiments in Basic Chemistry

Purpose/Abstract :

You learn experimental operations of basic inorganic chemistry, basic analytical chemistry, basic physical chemistry, and basic organic chemistry.

Goal :

You can make fundamental experiments of basic inorganic chemistry, basic analytical chemistry, basic physical chemistry, and basic organic chemistry.

Contents :

(1) Basic operations
  Calibration of volumetric measuring instruments
(2) Titrations
  Neutralization titration
  Precipitation titration
  Oxidation-reduction titration
  Complexometric titration
  Neutralization titration curves and acid dissociation constants of weak acids
(3) Analyses of absorption spectra using UV-vis spectrophotometer
(4) Measurement of enthalpy changes in neutralization and dissolving salts
(5) Syntheses of organic compounds
  Synthesis of 6,6-nylon from cyclohexene
  Synthesis of Aspirin

Books required/referenced :

Textbooks (directions for the experiments) will be given in the class; other references are shown in the directions.

Preparation and review :

Read the textbook and draw a flow chart of the experiment, in advance.

Grading :

Evaluation will be performed by your attendance records and laboratory reports.

Remarks :

Telephone: 022-795-6606 (staff room) : E-mail: toyota@m.tohoku.ac.jp

Course	Semester/Credits	Instructor	Affiliation
Laboratory Experiments in Chemistry A (化学一般実験A)	6 Semester 5 Credits	豊田　耕三 Kozo TOYODA	Laboratory of Fundamental Chemistry

Course code/number : SCH-OCH252E

Course Title : Laboratory Experiments in Chemistry

Purpose/Abstract :

You learn fundamental experimental operations of inorganic chemistry, analytical chemistry, and the related fields.

Goal :

You can make fundamental experiments of inorganic chemistry, analytical chemistry, and the related fields.

Contents :

(1) Inorganic experiments
  Synthesis of chemicals used for measurements
  Complex synthesis
  X-ray crystal structure analysis
  UV-visible absorption spectra of metal complexes
  Complex formation reaction rates
  Cyclic voltammetry of metal complexes
(2) Analytical experiments
  Determination of the composition of an iron phenanthroline complex by using spectrophotometry
  Determination of fluoride ion contents by using an iron-selective electrode
(3) Optional experiments and exercises

Books required/referenced :

Textbooks (directions for the experiments) will be given in the class; other references are shown in the directions.

Preparation and review :

Read the textbook and draw a flow chart of the experiment, in advance.

Grading :

Evaluation will be performed by your attendance records and laboratory reports.

Remarks :

Laboratory Experiments in Chemistry B (化学一般実験B)	7 Semester 6 Credits	豊田　耕三 Kozo TOYODA	Laboratory of Fundamental Chemistry

Course code/number : SCH-OCH253E

Course Title : Laboratory Experiments in Chemistry

Purpose/Abstract :

You learn fundamental experimental operations of physical chemistry, organic chemistry, and biochemistry.

Goal :

You can make fundamental experiments of physical chemistry, organic chemistry, and biochemistry.

Contents :

(1) Physical chemistry experiments
- Optics and molecular spectroscopy
- Molecular spectroscopy in solutions
- Electronics
- Computer calculation experiments

(2) Organic experiments
- Basic procedures for the organic chemistry experiments
- Grignard synthesis of triphenylmethanol
- Benzoin condensation and synthesis of hexaphenylbenzene
- Molecular modeling and various spectroscopic measurements

(3) Biochemical experiments
- Enzyme Reaction kinetics
- Basic gene cloning

Books required/referenced :

Textbooks (directions for the experiments) will be given in the class; other references are shown in the directions.

Preparation and review :

Read the textbook and draw a flow chart of the experiment, in advance.

Grading :

Course	Semester/Credits	Instructor	Affiliation
Analytical Chemistry A (分析化学A)	5 Semester 1 Credit	BREEDLOVE BRIAN	Laboratory of Coordination Chemistry

Course code/number : SCH-INO301E

Course Title : Analytical Chemistry A (AMC)

Purpose/Abstract :

This class is designed to give a survey of analytical techniques, including theory and instrumentation, used to anaylyze and characterize compounds and their properties. This is by no means an in-depth or comprehensive course in analytical chemistry.

Goal :

Students will gain an understanding of the analytical techniques and their instrumentation.

Contents :

1. Background, including basic definitions
2. Gravimetry
3. Spectroscopic methods
4. Spectrometry
5. Chromatography (if time permits)

Books required/referenced :

Holler, Skoog and Crouch “Principles of Instrumental Analysis 6th Ed.”
Skoog, West, Holler and Crouch “Fundamentals of Analytical Chemistry”, 9th Ed.

Preparation and review :

none

Grading :

Attendance and final exam

Remarks :

breedlove@m.tohoku.ac.jp

Course	Semester/Credits	Instructor	Affiliation
Inorganic Chemistry ⅠA （無機化学ⅠA）	6 Semester 1 Credit	谷口　耕治 Koji TANIGUCHI	Solid-State Metal-Complex Chemistry

Course code/number：SCH-INO303E

Course Title：Electronic Properties of Inorganic Materials Ⅰ

Purpose/Abstract：

Properties of solid are mainly dominated by an electronic structure of material. In this class, we will learn how to understand the atomic bonds and electrical conductivity of materials based on the electronic structure.

Goal：

The goal of this class is to understand the relationship between electronic structure and atomic bond/electrical conductivity of solid. One will understand the classification of atomic bonds and the definition of metal and insulatorthat based on an electronic structure.

Contents：

1．Introduction
（crystal structure, X-ray diffraction）
2．Bonding character in crystal
（Relationship between atomic bonding character and crystal structure）
3．Quantum-mechanical treatment of atomic bond
（Molecular orbital, LCAO-approximation, Hückel method）
4．Band Theory Ⅰ
（Expansion of molecular orbital to crystal）

Books required/referenced：

The Electronic Structure and Chemistry of Solids（P.A. Cox, OXFORD）, Transition Metal Oxides（P. A. Cox, OXFORD）, Electronic Structure and The Properties of Solids（W. A. Harrison, Dover）, etc.

Preparation and review：

Grading：

Inorganic Chemistry ⅠB （無機化学ⅠB）	6 Semester 1 Credit	岡田　純平 Junpei OKADA	Laboratory of Crystal Chemistry

Course code/number：SCH-INO304E

Course Title：Inorganic Chemistry ⅠB

Purpose/Abstract：

When we synthesize materials, we should refer to phase diagrams. Phase diagrams are one of the most important sources of information concerning the behavior of elements, compounds and solutions. They give us information of phase composition and phase stability as a function of temperature, pressure and composition. The course is intended to understand the principles of phase diagrams.

Goal：

The goal of this class is to understand and familiarize with binary phase diagrams.

Contents：

1．Introduction
（Basics for thermodynamics）
2．Phase equilibria and phase diagrams
（One component phase diagram, Phase rule and equilibrium）
3．Phase diagrams of two-component systems
（Solid solutions, Construction of equilibrium phase diagrams of two-component systems, Cooling curves）
4．Interpretation of phase diagrams
（Phase composition, The Lever rule）

Books required/referenced：

1．Introduction to Metallurgical Thermodynamics, D.R. Gaskell, McGraw-Hill, 1980
2．Thermodynamics of Solids, R.A. Swalin, John Wiley, 1968

Inorganic Chemistry Ⅱ A （無機化学Ⅱ A）	6 Semester 1 Credit	宮坂　等 Hitoshi MIYASAKA	Solid-State Metal-Complex Chemistry

Course code/number：SCH-INO305E

Course Title：Inorganic Chemistry Ⅱ A

Purpose/Abstract：

Topics will include the structure and mechanical properties of supramolecular complexes

Goal：

The goal of this course is to gain an understanding of supramolecular chemistry

Contents：

After discussion about the basics of supramolecular chemistry, students will present a topic involving supramolecular chemistry for discussion by the class.

Books required/referenced：

Steed and Atwood, Supramolecular Chemistry, 2nd Ed., Wiley

Preparation and review：

Prepare a lecture and discussion on a topic in supramolecular chemistry

Grading：

Attendance and in-class discussions will be used to evaluate the students' progress.

Remarks：

Course Title：Principles and Applications of Electron Paramagnetic Resonance（EPR or ESR）

Purpose/Abstract：

To understand basic principles of electron paramagnetic resonance（EPR）and to learn its application to studies of molecular structures, electronic states and dynamics

Goal：

Subjects to be learned

1. Properties of a spin angular momentum.
2. How magnetism is explained by electron spin.
3. Basic principles of magnetic resonance phenomenon
4. Magnetic interactions and its relation to molecular structures, electronic states and dynamics.
5. Microwave techniques used in EPR.
6. Some of advanced techniques in EPR: pulse method, double resonances, high-field and high-frequency methods, and time resolved measurements

Contents：

1. Properties of a spin angular momentum.
2. Several types of magnetism and role of electron spin.
3. Basic principles of magnetic resonance phenomenon
4. Magnetic interactions of electron spin: Interactions with static field, nuclear spins and electron spins
5. Microwave techniques used in EPR.
6. Some of advanced techniques in EPR: pulse method, double resonances, high-field and high-frequency methods, and time resolved measurements

90 minutes for each subject.

Polymer Chemistry Ⅰ （高分子化学Ⅰ）	6 Semester 1 Credit	及川　英俊 Hidetoshi OIKAWA	Laboratory of Hybridized Organic Nanocrystal Materials, IMRAM

Course code/number：SCH-OCH301E

Course Title：Polymer Chemistry Ⅰ

Purpose/Abstract：

The category of polymer (or macromolecular) materials is so wide, for example, familiar fiber (or textile), rubber, plastics, and photo-resist to fabricate semiconductor integrated circuit (IC). Protein and nucleic acid are also a kind of polymer, so-called biopolymer.

In this lecture, synthesis, structure, and properties of polymers will be first introduced, which is considerably different from the case of ordinary organic low-molecular weight compounds. Next, high-performance and functional polymers, and hybrid polymer meterials will be explained in detail. In addition, biopolymer will be summarized from the viewpoint of biophysics.

Goal：

Aiming at making the backbone in the filed of advanced materials through basic understanding for polymer materials.

Contents：

(1) Basic Principles
(2) Molecular Weight and Polymer Solutions.
(3) Chemical Structure and Polymer Morphorogy
(4) Chemical Structure and Polymer Properties
(5) Evaluation, Characterization and analysis of Polymers.

Books required/referenced：

“Polymer Chemistry —An Introduction—” (3rd Ed.) by Malcolm P. Stevens, Oxford Univ., Press, NY, 1999.

Preparation and review：

The session time is limited and therefore self-directed learning is important. Students are required to review for each class.

Grading：

Attendance and regular examination

Course Title：Spectral Identification of Organic Compounds

Purpose/Abstract：

Modern Analytical methods available in organic laboratories allow to carry out identification and purity control of organic compounds. This class will teach the students how to use the spectral data for elucidating the structures of organic compounds.

Goal：

Teach the students how to elucidate the structure of an organic compound from the combination of NMR, IR and mass-spectra

Contents：

NMR spectroscop:
- Proton NMR
- Carbon NMR
- Multinuclear NMR
- 2D NMR

Mass-spectroscopy
IR spectrosopy
After several introductory lectures classes will be devoted to solving the problems for spectral identification

Books required/referenced：

Course Title：Organic Chemistry ⅠB

Purpose/Abstract：

This class is the formar part of series of organic chemistry classes, Organic Chemistry ⅠB and ⅡB. This class provides a thorough introduction to the current topis of organic chemisrtry. Fundamental knowledge and cutting-edge research in organic chemistry and related area will be presented by each professor.

Goal：

To gain an understanding of the cutting-edge research fields of organic chemistry, bioorganic chemistry, and organic materials.

Contents：

Advanced Polymer Materials
Topics of Chemical Biology and Bio-Nano&Medical-Biopolymers
The Chemical Reactions in the Biological Systems
Bioimaging based on chemistry
Enantioselective Catalysis
Some of these contents are included in Organic Chemistry ⅡB

Books required/referenced：

They will be announced in the class.

Course Title：Biochemistry of nucleic acid and protein synthesis.

Purpose/Abstract：

To learn the biological phenomena at the molecular level and to gain a deeper understanding of biochemsity, molecular biology and biophysics.

It is desirable to consistently attend the discussions in Biochemistry ⅡB concerning the photosynthesis, protein turnover and protein trafficking.

Goal：

Students will gain an understanding of the various biological phenomenom related to synthesis of nucleic acids and proteins.

Contents：

The lectures will cover chapters 28 to 32 of the textbook.

1st class　chap 28　DNA replication, repair and recombination Ⅰ
2nd class　chap 28　DNA replication, repair and recombination Ⅱ
3rd class　chap 29　RNA synthesis and processing Ⅰ
4th class　chap 29　RNA synthesis and processing Ⅱ
5th class　chap 30　Protein synthesis
6th class　chap 31　The control of gene expression in prokaryotes
7th class　chap 32　The control of gene expression in eukaryotes
including practical approach for heterologous protein expression

Books required/referenced：

Science, Technology and Industry in Japan (日本の産業と科学技術)	4 Semester 1 Credit	渡邉　由美子 Yumiko WATANABE	Global Learning Center, Institute for Excellence in Higher Education

Course code/number : SCH-OAR801E

Course Title : The past, present, and future of industry, science, technology and their relationships and integration in Japan

Purpose/Abstract :

This class is a newly developed multidisciplinary course that was organized by the faculties of science, engineering, and agriculture. Except for the first class, each class will feature a talk by a specialist in his/her field. The topic of each talk will be the "past, present, and future of industry, science, and technology, and their relationships and integration in Japan."

Students will obtain fundamental problem-solving abilities, proactiveness, understanding of different cultures, and a multidisciplinary perspective. Registered students are expected to apply what they learn from this course in the newly developed class titled "Multidisciplinary Internship."

Goal :

The goal of this course is to give students a multidisciplinary perspective and open-minded attitude.

Contents :

Schedule of the course

＃1　Guidance
＃2－8　Lectures by guest speakers who are specialists in the fields of science, technology, and industry.
（＃9）　Group presentations and/or individual essay on "The project to integrate the fields of science, technology, and agriculture" by students

Books required/referenced :

Preparation and review :

10 hours

Grading :

Attendance and active participation (50%), a group presentation or an essay on "Our/My project: how we/I will integrate the fields of science, technology, and agriculture" (50%)

Remarks :

Th guest espeakers and topics will be announced in timely manner. This course is opened to Japanese students, too.

Course Title : Biological productivity in aquatic zone and restoration from tsunami disaster

Purpose/Abstract :

Onagawa Town was one of the most prosperous fishing ports in Japan. However, the 9.0- magnitude Tohoku-Pacific Ocean Earthquake generated a tsunami as high as 15 meters in Onagawa, which caused the town to subside by 1 meter, and completely destroyed its central area. The ria coast of Onagawa and coastal region along the Pacific Ocean had been severely stricken by the tsunami. Various coastal organisms have acclimated to tsunami perturbations and survived in the area. In order to promote reconstruction of tsunami-stricken areas such as Onagawa with respect to aquatic production (fish catching, aquaculture and fishery processing), it might be a promising measure to scientifically focus on the adaptability of coastal ecosystems in the area against tsunami perturbations, and to raise public awareness of the uniqueness of the costal ecosystems and biodiversity. This subject highlights tsunami damage and revival situation in Onagawa Town including coastal ecosystems, and brings to understand the importance of constructing new relationship between natural biological productivity and human activity. You will join this subject for two days (20 and 21 September 2017) with staying at Onagawa Field Center.

Goal :

Students will
- learn about tsunami disaster.
- understand the importance of relationship between natural aquatic production and human activity.
- understand sustainable biological productivity and the application to reconstruction of human society.

Contents :

・Introduction to studies of marine science, biological productivity and restoration
・Field lecture about tsunami damage and regeneration of coastal ecosystems
・Field lecture about tsunami damage and revival situation in Onagawa Town

Books required/referenced :

Preparation and review :

Detailed schedule will be circulated in July 2017.

Grading :

Attendance, Activeness, Report
