(April 2020 – March 2021)

授 業 概 要

COURSE SYLLABUS

東北大学理学部

Faculty of Science
Tohoku University

Course	Semester/Credits	Instructor	Affiliation
Introduction to Basic Chemistry (基礎化学序論)	2 Semester 2 Credits	火原 彰秀 Akihide Hibara	Laboratory of Nano/Micro Chemical Measurements
<p>Course code/number : SCH-OCH201E</p> <p>Course Title : Introduction to Basic Chemistry (基礎化学序論)</p> <p>Purpose/Abstract : This class is offered to freshmen enrolled in the AMC course. Fundamental knowledge and cutting-edge research in chemistry and materials science will be presented in the form of seminars in each laboratory. Throughout these seminars, the differences in high school-level and college-level chemistry will be emphasized, and students will be given motivation for their future studies.</p> <p>Goal : Understanding of the basic fields of university-level chemistry spread over a cross-section of each field, such as organic chemistry, inorganic chemistry, analytical chemistry, biochemistry and physical chemistry.</p> <p>Contents : Following the schedule distributed during the initial class, students will visit laboratories to attend seminars and be introduced to laboratory facilities and learn the importance of basic chemistry as well as cutting-edge research.</p> <p>Books required/referenced : Indicated by each instructor Preparation and review : Indicated by each instructor</p> <p>Grading : Class attendance, attitude and activity</p> <p>Remarks : 主として実践的教育から構成される実務・実践的授業 / Practical business</p>			

Course	Semester/Credits	Instructor	Affiliation
Special Class in Basic Chemistry I (専門基礎化学 I)	3 Semester 2 Credits	南後 恵理子 Eriko Nango	量子ビーム構造生物化学 Quantum beam-based structural biology and chemistry
<p>Course code/number : SCH-PCH211E</p> <p>Course Title : Special Class in Basic Chemistry I</p> <p>Purpose/Abstract : In this lecture, we try to understand fundamentals of the quantum mechanics and quantum chemistry that are required for advanced chemistry courses. Starting with a lecture of the early quantum mechanics, we learn how to formulate the Schrödinger equation, which is the basic equation of quantum mechanics. The basic concept of wavefunctions (= solutions of the Schrödinger equations) are presented to understand the wave nature of particles in atomic scale. Then the simple models for vibrational and rotational motions of molecules, and the electronic state of the hydrogen atom are treated quantum mechanically as the prototypes for more complex atoms and molecules.</p> <p>Goal : Gain the skill to solve simple Schrödinger equations using a problem of a particle in a box. Extend it to solve quantum mechanical problems of the harmonic oscillator and the rigid rotator of diatomic molecules, and the electronic motion of the hydrogen atom.</p> <p>Contents : We will cover the following themes. 1. Outline and introduction to elementally physical chemistry 2. Dawn of the quantum theory 3. The classical wave equation 4. The Schrödinger equation 5. A particle in a box 6. General Principles of quantum mechanics 7. The harmonic oscillator and the rigid rotator 8. The hydrogen atom</p> <p>Books required/referenced : Physical Chemistry - a molecular approach by D.A.McQuarrie and J.D.Simon Preparation and review : Read the textbook before and after the lectures and try to solve the examples in the textbook.</p> <p>Grading : Attendance + Mid-term exam. + Final exam. (+Additional exam)</p> <p>Remarks :</p>			

Course	Semester/Credits	Instructor	Affiliation
Special Class in Basic Chemistry II (専門基礎化学Ⅱ)	3 Semester 2 Credits	BREEDLOVE BRIAN	Laboratory of Nanomaterials
<p>Course code/number : SCH-INO211E Course Title : Special Class in Basic Chemistry II (AMC) Purpose/Abstract : This course builds from the basic electronic structure of atoms and molecules to bonding in compounds to structure and finally to the relationship between the structure and properties of compounds. It is my aim that students will develop tools needed to predict the properties from the electronic and physical structures of relatively simple compounds.</p> <p>Goal : The goal of this course is to learn the basics of electronic structures of atoms and molecules and bonding. In addition, students will be able to understand the relationship among those topics and the properties of compounds.</p> <p>Contents : Below is a tentative schedule and content for the course. The schedule may be changed due to time constraints or at the discretion of the professor.</p> <ol style="list-style-type: none"> 1. Elemental Origin and Atomic Composition 2. Quantum Mechanics, 3. Periodic Table General Properties and Periodicity, Magnetic Properties 4. Covalent Bonding, Lewis Structure, Molecular Orbital Method 5. Atoms, Molecule, polyatomic molecules 6. Valence bonding method, hybrid orbital, π bond 7. Molecular structure and polarity 8. Symmetry and group theory 9. Group theory molecular orbital, application to molecular vibration 10. Crystal structure (1) 11. Crystal structure (2) 12. Ionic solids 13. Metal and metal like 14. Electric conduction, semiconductor, superconductivity <p>Books required/referenced : Primary text: Inorganic Chemistry 6th Ed, General Chemistry 9th Ed. by Ebbing and Gammon and other texts</p> <p>Preparation and review : You should be reading the chapters and trying problems not assigned by the professor.</p> <p>Grading : Class attendance, homework, and two exams</p> <p>Remarks : breedlove.brian.b1@tohoku.ac.jp</p>			

Course	Semester/Credits	Instructor	Affiliation
Special Class in Basic Chemistry III (専門基礎化学Ⅲ)	3 Semester 2 Credits	和田 健彦 Takehiko Wada	Laboratory of Nanobio Functional Materials/Chemical Biology & Supramolecular Photochirogenesis
<p>Course code/number : SCH-ORG211E Course Title : Basic Organic Chemistry I Purpose/Abstract : Objective and Summary of Class : Students will learn how to understand organic chemical reactions. The purpose is to learn the reactions of basic organic compounds, such as alkanes, alkenes, and organic halides, via the flow of electrons shown using arrows.</p> <ol style="list-style-type: none"> (1) Structure and Bonding. (2) Organic Compounds (3) Stereochemistry (4) Alkanes (5) Alkenes (6) Alkynes <p>Intended for those students majoring in organic chemistry, this class will provide the broad fundamentals of organic chemistry needed to become a chemist. It is desirable to continue taking Chemistry C, Special Class in Basic Chemistry III, and General Organic Chemistry A, B and C as well as to take Exercises in Organic Chemistry A and Organic Chemistry I A and II A (class concerning spectroscopy)</p> <p>Goal :</p> <ul style="list-style-type: none"> •To understand chemical bonds and structure of organic compounds. •To understand stereochemistry. •To understand the main reactions of alkanes via electron flow arrows. •To understand the main reactions of alkenes via electron flow arrows. •To understand the main reactions of alkynes via electron flow arrows. <p>Contents : During the class, chapters 1-8 of "Organic Chemistry, 8th ed." by McMurry will be studied. Basically, I will give quizzes for each chapter, so please do your best at preparation and review using the textbook.</p> <p>Books required/referenced : "Organic Chemistry 9th ed." by John McMurry</p> <p>Preparation and review : Preparation / review / tasks are instructed during lecture.</p> <p>Grading : Quiz and reports and a final exam. Quizzes will be given at the beginning of classes.</p> <p>Remarks : The office hours are basically from 10 am to 5 pm, from Monday to Friday</p>			

Course	Semester/Credits	Instructor	Affiliation
Special Class in Basic Chemistry IV (専門基礎化学Ⅳ)	3 Semester 2 Credits	BREEDLOVE BRIAN	Laboratory of Nanomaterials
<p>Course code/number : SCH-INO211E</p> <p>Course Title : Special Class in Basic Chemistry IV (AMC)</p> <p>Purpose/Abstract : This class will cover general analytical and inorganic chemistry, such as equilibria, acids and bases, acid-base equilibria, oxidation and reduction reactions, electrochemistry, etc.</p> <p>Goal : Students will gain an understanding in basic topics in analytical and inorganic chemistries, which will aid them in their future studies.</p> <p>Contents : Contents and Schedule: 1. Chemical equilibria 2. Acid and bases 3. Acid-base equilibria 4. Oxidation and reduction 5. Introduction to coordination complexes and solubility 6. Electrochemistry 7. Introduction to symmetry</p> <p>Books required/referenced : inorganic Chemistry 6th ed. Ebbing and Gammon, General Chemistry 9th ed. Preparation and review : read and do practice problems</p> <p>Grading : Attendance, homework, and two exams</p> <p>Remarks : breedlove.brian.bl@tohoku.ac.jp</p>			

Course	Semester/Credits	Instructor	Affiliation
General Physical Chemistry A (物理化学概論A)	5 Semester 2 Credits	米田 患弘 Tadahiro Komeda	Advanced Scanning Probe Microscopy & Laboratories at Katahira Campus.
<p>Course code/number : SCH-PCH221E</p> <p>Course Title : Thermodynamics and statistical physics</p> <p>Purpose/Abstract : Through lectures of physical chemistry classes, fundamentals of physical and mathematical knowledge will be lectured. However, it is also necessary to solve actual problems in physical chemistry issues. Topics and exercises in special cases will be extended.</p> <p>Goal : In this course, we try to solve problems related to the issues discussed in AMC courses. The goal of this class is to require skills through these process.</p> <p>Contents : Part of this class will go along with 'Problems and solutions to accompany Physical Chemistry - molecular approach by D.A. McQuarrie and J.D. Simon' in which the problems shown in each chapter of the text book are analyzed.</p> <p>Books required/referenced : Indicated by each instructor.</p> <p>Preparation and review : Homework quiz are assigned during class</p> <p>Grading : class attendance, reports and scores of examinations</p> <p>Remarks :</p>			

Course	Semester/Credits	Instructor	Affiliation
General Physical Chemistry B (物理化学概論B)	4 Semester 2 Credits	組頭 広志 Hiroshi Kumigashira	Laboratory of Organic Physical Chemistry
<p>Course code/number : SCH-PCH222E Course Title : General Physical Chemistry B Purpose/Abstract : The course deals with the introduction to the principles of quantum mechanics and their application to chemical systems. Topics include the formalism and mathematical tools of quantum mechanics; approximate methods; atomic structure; the chemical bond, valence bond; and molecular orbital theory.</p> <p>Goal : The aim of this course is that students are able to: (1) understand approximation methods, including the variational method and perturbation theory; (2) explain the atomic structures and their spectroscopic properties; (3) understand the quantum mechanical description of the chemical bond and molecular structures; (4) be familiar with the concept of molecular orbital theory.</p> <p>Contents : The contents and schedule are as shown in below: (1) Introduction (2) Approximation method in quantum mechanics: Variational method (3) Approximation method in quantum mechanics: Perturbation theory (4) Structure of the helium atom (5) Multiple electron atoms and the Pauli principle (6) Multiple electron atoms: term symbol and atomic spectra (7) Chemical bond: the hydrogen molecular ion (8) Chemical bond: The molecular orbital method (9) Chemical bond: the structure of diatomic molecules (10) Bonding in polyatomic molecules (11) Hybridization and molecular structure (12) Conjugated pi-electron systems: The Hückel molecular orbital method (13) Computational quantum chemistry</p> <p>Books required/referenced : Physical Chemistry - a molecular approach by D.A. McQuarrie and J.D. Simon</p> <p>Preparation and review : The session time is limited and therefore self-directed learning is important. Students are required to prepare and review for each class.</p> <p>Grading : Students are evaluated on their class attendance, the midterm report, and the final examination.</p> <p>Remarks :</p>			

Course	Semester/Credits	Instructor	Affiliation
General Physical Chemistry C (物理化学概論C)	5 Semester 2 Credits	荒木 保幸 Yasuyuki Araki	Laboratory for Functional Photochemistry and Chemical Biology
<p>Course code/number : SCH-PCH223E Course Title : General Physical Chemistry C Purpose/Abstract : Chemical kinetics, also known as reaction kinetics, is the study of the speed of chemical processes. A study of chemical kinetics includes investigations of how experimental conditions can influence on the speed of a chemical reaction. In this class, appropriate construction of mathematical models that can describe the characteristics of a chemical reaction will be discussed. Concept of "order of reaction" and "how to determine order of reaction along with integrated rate laws" are also the most important topics of this class. Moreover, the enzymatic reaction kinetics will be introduced to understand the specific examples of chemical reaction rate determination. Through the trial to solve the problems in the textbook, the establishment of the knowledge will be achieved.</p> <p>Goal : The main goal is to teach principles of reaction kinetics and catalysis. Topics covered include the laws and theories governing reaction rates and mechanisms in gas, condensed phase and at the solid-liquid interface. Modern experimental approaches to study kinetics in complex chemical and biochemical systems and analysis of experimental data will be introduced. Computational approaches to estimate rates of chemical reactions and study the mechanism of catalysis will be discussed.</p> <p>Contents : Contents and Progress Schedule of the Class: In this class, the contents from Chapter 27 to Chapter 31 of the textbook (Physical Chemistry – a molecular approach by D. A. McQuarrie and J.D. Simon) will be discussed. Chapter 27 / The Kinetic Theory of Gases Chapter 28 / Chemical Kinetics : Rate Laws Chapter 29 / Chemical Kinetics : Reaction Mechanisms Chapter 30 / Gas-phase Reaction Dynamics Chapter 31 / Solid and Surface Chemistry</p> <p>Books required/referenced : Physical Chemistry – a molecular approach by D. A. McQuarrie and J.D. Simon</p> <p>Preparation and review : Students who joins in this class is expected to keep prep.</p> <p>Grading : Record and Evaluation Method: Class attendance (perfect attendance is 60 points), reports (perfect submission is 20 points) and scores of final examinations (full score is 20 points) are totally evaluated. Person who gains over 90 points gets AA score.</p> <p>Remarks : This class will be conducted in English.</p>

Course	Semester/Credits	Instructor	Affiliation
General Inorganic and Analytical Chemistry A (無機分析化学概論 A)	4 Semester 2 Credits	宇田 聡 Satoshi Uda	Laboratory of Crystal Chemistry
<p>Course code/number : SCH-INO221E</p> <p>Course Title : General Inorganic and Analytical Chemistry A 無機分析化学概論 A</p> <p>Purpose/Abstract :</p> <p>Thermodynamics is a powerful tool to understand the equilibrium phase relationship that is needed for materials processing including materials synthesis and growth from the conventional to the most advanced one. It also gives an insight of the nonequilibrium process in terms of the deviation from the equilibrium state. It should be also noted that thermodynamics is a powerful mean to prove your developing theory.</p> <p>Although thermodynamics is one of the classic academics, it is not easy to learn. This is because the 'practical state' is often far different from the 'ideal' and only ideal-gas case with mathematical expressions are simply demonstrated in teaching without showing its applications to the 'real world'. In this class, students will have an exciting learning experience of the thermodynamics through its practical applications with simple math forms. In addition, this class is linked to the 'Exercises in Inorganic and Analytical Chemistry A' and students will learn about the practical use of thermodynamics by solving a few kinds of problems associated with chemical equilibrium or chemical reactions.</p> <p>Goal :</p> <ul style="list-style-type: none"> · Learn 1st law and 2nd law of Thermodynamics. · Learn different kinds of free energy and how they are related by the Legendre transformation. · Learn the basic concepts of Gibbs free energy, partial molar quantity. · Learn the derivation of chemical potentials to understand the phase relationship. · Learn how to read equilibrium phase diagrams. · To get the idea how to apply the thermodynamics to pha <p>Contents :</p> <p>The class will cover fundamentals and practical examples as well related to thermodynamics.</p> <ol style="list-style-type: none"> I. Scope of Thermodynamics II. 1st law and 2nd law of Thermodynamics III. Equilibrium IV. Chemical Potentials and Activities V. Phase Diagrams VI. The Kinetics of Phase Transformations <p>Books required/referenced :</p> <p>Handout will be given before the class begins.</p> <p>Preparation and review :</p> <p>Students are required to prepare for the assigned part of the designated textbook for each class. They are also required to make a thorough review, mainly by completing assignments.</p> <p>Grading :</p> <p>Results of class attendance, quizzes and examination will be used for evaluation.</p> <p>Remarks :</p> <p>Contact address: uda@imr.tohoku.ac.jp Tel : 022-215-2100</p>

Exercises in Inorganic and Analytical Chemistry B (無機分析化学演習B)	5 Semester 1 Credit	高坂 亘 関根 良博 福山 真央	Laboratory of Solid-State Metal-Complex Chemistry Laboratory of Nano/Micro Chemical Measurements
Wataru Kosaka, Yoshihiro Sekine, Mao Fukuyama			
Course code/number : SCH-INO252E			
Course Title : Exercises in Inorganic and Analytical Chemistry: From Basic Inorganic Chemistry to Coordination Chemistry and Ligand-Field Theory			
Purpose/Abstract :			
Conduct exercises in inorganic and analytical chemistry, in particular an area from basic inorganic chemistry to coordination chemistry related to the solid-state molecular chemistry, by explaining their fields.			
Goal :			
To gain a deeper understanding of the course. And we hope that you may be interested in the field of the solid-state molecular chemistry.			
Contents :			
Conduct exercises and explanation for the fields.			
Books required/referenced :			
The problem set will be given at each class hour, but the following texts may be useful for your study: Shriver & Atkins' Inorganic Chemistry, by P. Atkins et al, Oxford University Press. D- and F-Block Chemistry, by C. Jones, RSC publisher.			
Preparation and review :			
The problems given at each class hour should be solved.			
Grading :			
Evaluation will be performed by your attendance records and results of the exercises.			
Remarks :			
w-kosaka@imr.tohoku.ac.jp, y-sekine@imr.tohoku.ac.jp 022-215-2033 maofukuyama@tohoku.ac.jp 022-217-5640			

Course	Semester/Credits	Instructor	Affiliation
General Organic Chemistry A (有機化学概論A)	4 Semester 2 Credits	水上 進 Shin Mizukami	Laboratory of Cell Functional Molecular Chemistry
Course code/number : SCH-ORG221E		Contents :	
Course Title : General Organic Chemistry A		The class will involve chapters 10, 11, and 14–18 of Organic Chemistry 9th Ed. by John McMurry. However, the parts in chapter 14 covering spectroscopy will be omitted.	
Purpose/Abstract :		1. Introduction	
Objective and Summary of Class: This class is part of organic chemistry classes, including Special Class in Basic Chemistry III, and General Organic Chemistry A, C, and D. The lecture covers the following topics :		2. Organohalides (Chapter 10)	
(1) Basic chemistry of organic halides.		3. Nucleophilic substitutions and eliminations (Chapter 11)	
(2) Nucleophilic substitution reactions and reaction theory		4. Conjugated compounds (Chapter 14)	
(3) Diene and allylic systems		5. Benzene and aromaticity (Chapters 15)	
(4) Conjugated and aromatic compounds		6. Electrophilic aromatic substitution (Chapter 16)	
(5) Aromatic substitution reactions		7. Alcohols and phenols (Chapter 17)	
(6) Properties of alcohols, phenols, ethers, and thiols.		8. Ethers and epoxides; Thiols and Sulfides (Chapter 18)	
This class will provide the broad fundamentals of organic chemistry that are essential for students to be a chemist.		Books required/referenced :	
Goal :		McMurry Organic Chemistry 9th Ed.	
Goal of Study: To understand		Preparation and review :	
(1) Properties of alkyl halides and related compounds, synthetic methods, radical reactions, principles of the stability of allyl radicals, the characteristics of Grignard reactions		Problem-solving exercise	
(2) Reactions of organic compounds, especially the characteristics and reaction mechanisms of nucleophilic substitutions and aliphatic reactions		Grading :	
		Grading: Evaluation will be performed on the basis of exams, class participation, and homework results.	
		Remarks :

General Organic Chemistry D (有機化学概論D)	5 Semester 2 Credits	永次 史 Fumi Nagatsugi	Laboratory of Synthesis of Organic Functional Molecules
<p>Course code/number : SCH-ORG224E</p> <p>Course Title : General Organic Chemistry D</p> <p>Purpose/Abstract : Objective and Summary of Class: This class is part of series of organic chemistry classes, including General Organic Chemistry A, C, and D. This lecture will concern the following topics: (1) Basic chemistry of amines and heterocycles (2) Chemistry of biomolecules 2-1 Carbohydrates 2-2 Aminoacids, Peptides and Proteins 2-3 Lipids 2-4 Nucleic acids (3) The organic chemistry of metabolic pathway (4) Pericyclic reactions : electrocyclic reactions, cyclo additions and sigmatropic rearrangements</p> <p>Goal : Goal of Study (1) To understand the synthetic method of amines and reactions of amines (2) To understand the chemical properties and reactivity of heterocyclic amines (3) To understand the structures and biological functions of biomolecules (carbohydrates, amino acids, peptides, proteins, lipids and nucleic acids) (4) To understand the organic chemistry of metabolic pathway in the cells of living organisms (5) To understand the pericyclic reactions by molecular orbital theory</p> <p>Contents : The class will involve chapters 24-30 of Organic Chemistry by John McMurry.</p> <p>Books required/referenced : Textbook and References: "Organic Chemistry 8th ed." by John McMurry</p> <p>Preparation and review : They should do the homework, which is assigned in the class. In addition, they should do the exercise in the text book</p> <p>Grading : Evaluation will be performed on the basis of exam and the homework results.</p> <p>Remarks :</p>

Exercises in Organic Chemistry A (有機化学演習A)	4 Semester 1 Credit	永次 史 水上 進 和田 健彦	Institute of Multidisciplinary Research for Advanced Materials
Fumi Nagatsugi, Shin Mizukami, Takehiko Wada			
Course code/number : SCH-ORG251E			
Course Title : Exercises in Organic Chemistry A			
Purpose/Abstract :			
Objective and Summary of Class:			
Understanding of organic chemistry will be deepened by performing exercises based on the lecture contents of "Chemistry C" and "Special Class in Basic Chemistry III" and in parallel "General Organic Chemistry A" and "Laboratory Experiments in Chemistry A" (up to chapter 18 in McMurry, "Organic Chemistry", 8th ed.)			
Goal :			
It will be possible to explain basic organic chemistry in real terms. In particular, organic reaction mechanisms can be described with arrows showing the movement of electrons.			
Contents :			
The problems at the end of each chapter of McMurry's "Organic Chemistry", 8th ed. up to chapter 18 will be performed. Details will be explained during the 1st lecture.			
Books required/referenced :			
McMurry "Organic Chemistry", 8th ed. and 9th ed. References will be introduced accordingly.			
Preparation and review :			
You should study the exercise in the McMurry's "Organic Chemistry", 8th ed. (chapters 1-18)			
Grading :			
Evaluation will be based on attendance and the number of exercise answers given. Additional points will be given for answers written on the blackboard.			
Remarks :			
主として実践的教育から構成される実務・実践的授業 / Practical business

Exercises in Organic Chemistry B (有機化学演習B)	5 Semester 1 Credit	永次 史 和田 健彦	Institute of Multidisciplinary Research for Advanced Materials
Fumi Nagatsugi, Takehiko Wada			
Course code/number : SCH-ORG252E			
Course Title : Exercises in Organic Chemistry B			
Purpose/Abstract :			
Understanding of organic chemistry will be deepened by performing exercises based on the lecture contents of "General Organic Chemistry C" and "General Organic Chemistry D" (from chapter 19 up to chapter 29 in McMurry, "Organic Chemistry", 8th ed.)			
Goal :			
It will be possible to explain basic organic chemistry in real terms. In particular, organic reaction mechanisms can be described with arrows showing the movement of electrons.			
Contents :			
The problems at the end of each chapter of McMurry's "Organic Chemistry", 8th ed. (chapters 19-29) will be performed. Details will be explained during the 1st lecture.			
Books required/referenced :			
McMurry "Organic Chemistry", 8th ed. References will be introduced accordingly.			
Preparation and review :			
You should study the exercise in the McMurry's "Organic Chemistry", 8th ed. (chapters 19-29).			
Grading :			
Evaluation will be based on attendance and the number of exercise answers given. Additional points will be given for answers written on the blackboard.			
Remarks :

Analytical Chemistry A (分析化学A)	5 Semester 1 Credit	BREEDLOVE BRIAN	Laboratory of Nanomaterials
<p>Course code/number : SCH-INO301E</p> <p>Course Title : Analytical Chemistry A (AMC)</p> <p>Purpose/Abstract : This class is designed to give a survey of analytical techniques, including theory and instrumentation, used to analyze and characterize compounds and their properties. This is by no means an in-depth or comprehensive course in analytical chemistry.</p> <p>Goal : Students will gain an understanding of the analytical techniques and their instrumentation.</p> <p>Contents :</p> <ol style="list-style-type: none"> 1. Background, including basic definitions 2. Spectroscopic methods 3. Spectrometry 4. Chromatography (if time permits) <p>Books required/referenced : Holler, Skoog and Crouch "Principles of Instrumental Analysis 6th Ed." Skoog, West, Holler and Crouch "Fundamentals of Analytical Chemistry", 9th Ed.</p> <p>Preparation and review : Reading appropriate chapters in the textbook</p> <p>Grading : Attendance and final exam</p> <p>Remarks : breedlove.brian.b1@tohoku.ac.jp</p>			

Course	Semester/Credits	Instructor	Affiliation
Inorganic Chemistry I A (無機化学 I A)	6 Semester 1 Credit	谷口 耕治 Koji Taniguchi	Laboratory of Solid-State Metal-Complex Chemistry
<p>Course code/number : SCH-INO303E</p> <p>Course Title : Electronic Properties of Inorganic Materials</p> <p>Purpose/Abstract : Properties of solid are mainly dominated by an electronic structure of material. In this class, we will learn how to understand the atomic bonds, which form a crystal structure, and electric properties such as electrical conductivity of materials based on the electronic structure.</p> <p>Goal : The goal of this class is to understand the relationship between electronic structure and atomic bond/electrical conductivity of solid. One will understand the classification of atomic bonds and the definition of metal and insulator that based on an electronic structure.</p> <p>Contents : 1. Introduction (crystal structure, X-ray diffraction) 2. Bonding character in crystal (Relationship between atomic bonding character and crystal structure) 3. Quantum-mechanical treatment of atomic bond (Molecular orbital, LCAO-approximation, Hückel method) 4. Band Theory (Expansion of molecular orbital to crystal)</p> <p>Books required/referenced : 固体の電子構造と化学 (P.A. Cox 著、魚崎浩平ほか訳) など</p> <p>Preparation and review : The session time is limited and therefore self-directed learning is important. Students are required to review for each class.</p> <p>Grading : Class attendance and examination</p> <p>Remarks :</p>

Inorganic Chemistry I B (無機化学 I B)	6 Semester 1 Credit	岡田 純平 Junpei Okada	Laboratory of Crystal Chemistry
<p>Course code/number : SCH-INO304E</p> <p>Course Title : Inorganic Chemistry I B</p> <p>Purpose/Abstract : When we synthesize materials, we should refer to phase diagrams. Phase diagrams are one of the most important sources of information concerning the behavior of elements, compounds and solutions. They give us information of phase composition and phase stability as a function of temperature, pressure and composition. The course is intended to understand the principles of phase diagrams.</p> <p>Goal : The goal of this class is to understand and familiarize with binary and ternary phase diagrams.</p> <p>Contents : 1. Introduction (Basics for thermodynamics) 2. Phase equilibria and phase diagrams (One component phase diagram, Phase rule and equilibrium) 3. Phase diagrams of two-component systems (Solid solutions, Construction of equilibrium phase diagrams of two-component systems, Cooling curves) 4. Interpretation of phase diagrams (Phase composition, The Lever rule)</p> <p>Books required/referenced : 1. Introduction to Metallurgical Thermodynamics, D.R. Gaskell, McGraw-Hill, 1980 2. Thermodynamics of Solids, R.A. Swalin, John Wiley, 1968</p> <p>Preparation and review : Reports</p> <p>Grading : Class attendance and examination</p> <p>Remarks :</p>

Polymer Chemistry I (高分子化学 I)	6 Semester 1 Credit	和田 健彦 Takehiko Wada	Laboratory of Nanobio Functional Materials/Chemical Biology & Supramolecular Photochirogenesis
<p>Course code/number : SCH-OCH301E</p> <p>Course Title : Polymer Chemistry I</p> <p>Purpose/Abstract : The category of polymer (or macromolecular) materials is so wide, for example, familiar fiber (or textile), rubber, plastics, and photo-resist to fabricate semiconductor integrated circuit (IC). Protein and nucleic acid are also a kind of polymer, so-called biopolymer. In this lecture, synthesis, structure, and properties of polymers will be first introduced, which is considerably different from the case of ordinary organic low-molecular weight compounds. Next, high-performance and functional polymers, and hybrid polymer materials will be explained in detail. In addition, biopolymer will be summarized from the viewpoint of biophysics.</p> <p>Goal : Aiming at making the backbone in the specific fields of advanced materials science in nano-science and nano-technology through basic understanding for polymer material chemistry.</p> <p>Contents :</p> <ol style="list-style-type: none"> (1) Basic Principles (2) Molecular Weight and Polymer Solutions. (3) Chemical Structure and Polymer Morphology (4) Chemical Structure and Polymer Properties (5) Evaluation, Characterization and analysis of Polymers. <p>Books required/referenced : "Polymer Chemistry -An Introduction-" (3rd Ed.) by Malcolm P. Stevens, Oxford Univ., Press, NY, 1999.</p> <p>Preparation and review : The session time is limited and therefore self-directed learning is important. Students are required to review for each class.</p> <p>Grading : Attendance and regular examination Remarks :</p>
