| 授業の目的<br>と概要<br>/Object and<br>summary<br>of class  | <p>The purpose of this course is to provide students with the basic theories of Marxian and other non-mainstream economics by using mathematical methods.</p> <p>The course not only provides different explanation concerning the same phenomena (e.g. positiveness of prices) from the mainstream economics but also deals with the phenomena which are not explained in the orthodox textbooks.</p> <p>Given the tendency that unequal distribution of income and wealth is growing all over the world, Marxian as well as other non-mainstream economics are recently revisited. Due to this course, it is expected that the different ways of thinking about capitalist economies from the mainstream are possible.</p>  |
| 学修の<br>到達目標<br>/Goal of<br>study  | <p>This course has an ambitious goal of acquiring such knowledge and skills as follows:</p> <ol style="list-style-type: none"> <li>1) basic properties of linear economic models</li> <li>2) understanding of alternative ways in order to theorise capitalism by using the models</li> <li>3) value, prices, and choice of technique, and the paradox of capital theory</li> <li>4) economic growth based on a simple two-class economy</li> </ol>   |
| 授業内容・<br>方法と<br>進度予定<br>/Contents<br>and<br>progress<br>schedule<br>of the class  | <p>This course will be given in-person as long as the BCP is at level 1. How to deliver the lectures when the BCP level changes will be announced through Google classroom. Thus, don't fail to register for Google classroom if you wish to take this course.</p> <p>This course is divided into two parts, the first of which is charged by Prof. Mori and the second of which is by Prof. Kurose. The first part deals with the Classical-Marxian value and price; the contents are given as follows:</p> <ol style="list-style-type: none"> <li>1) Input-Output Analysis</li> <li>2) Labor theory of value</li> <li>3) Price of production</li> <li>4) Hawkins-Simon condition</li> <li>5) Sraffian price theory</li> <li>6) Perron-Frobenius theorem</li> </ol> <p>On the basis of the first part, the second one deals with the choice of technique, income distribution, paradox of capital theory, and economic growth models, and argues the relevance of these models. The contents of the second part are given as follows:</p> <ol style="list-style-type: none"> <li>1) Leontief production model with multiple alternative techniques</li> <li>2) Capital paradox</li> <li>3) Growth and distribution in a two-class economy</li> </ol> <p>The lecture-notes and other material are uploaded to Google classroom, the code of which is given as follows:<br/>zd2cf6v.</p> |

1単位の授業科目は、45時間の学修を必要とする内容をもって構成することを標準としています。1単位の修得に必要な学修時間の目安は、「講義・演習」については15～30時間に授業および授業時間外学修(予習・復習など)30～15時間、「実験・実習及び実技」については30～45時間の授業および授業時間外学修(予習・復習など)15～0時間です。

One-credit courses require 45 hours of study. In lecture and exercise-based classes, one credit consists of 15-30 hours of class time and 30-15 hours of preparation and review outside of class. In laboratory, practical skill classes, one credit consists of 30-45 hours of class time and 15-0 hours of preparation and review outside of class.
