# Applied Marine Biology (AMB) Course Timetable & Syllabus 2023~2024

(Updated on October 1, 2023)

Faculty of Agriculture Tohoku University

# INDEX

Timetable for the AMB course		5
AMB Course Curriculum		7
Introduction to Aquatic Production	水圏環境コミュニケーション論	11
Introduction to Natural and Agricultural Production	陸圏環境コミュニケーション論	12
Modern Agriculture and Agricultural Science	現代における農と農学	13
Introduction to Physiology and Ecology	生理·生態学概論	14
An Introduction to Bioindustrial Information Processing	生物生産情報処理概論	15
Reading of Scientific Paper I	科学論文講読 I	16
Reading of Scientific Paper II	科学論文講読Ⅱ	17
Practice on Marine Bio-resources Science	臨海実習	18
Physiology of Biological Resources	資源生物生理学	19
Animal Ecology and Ethology	資源動物生態学	20
Fish Genetics and Breeding Science	水産遺伝育種学	21
Field Practice of Marine Production I • II	生産フィールド実習Ⅰ・Ⅱ	22
Fishery Science Practice I · II	学生実験Ⅰ・Ⅱ	23
Basic Chemistry, Practice	基礎化学実験	24
Basic Biology, Practice	基礎生物学実験	25
Aquacultural Biology	水産増殖学	26

Fisheries Biology and Ecology	水産資源生態学	27
Aquatic Plant Ecology	水圈植物生態学	28
Marine Biochemistry	水産化学	29
Biological Oceanography	生物海洋学	30
Applied Genetics in Aquatic Organisms	沿岸生物学	31
Aquatic Invertebrate Biology	水圈無脊椎動物学	32
Applied Aquatic Botany	水圈植物学	33
Marine Product Technology	水産利用学	34
Seafood Management	水産食品管理学	35
Planktology	プランクトン学	36
Marine Coastal Ecology (Integrate Aquatic Biology)	沿岸環境学 (水族生理生態遺伝学)	37
Marine Applied Biochemistry	海洋応用生物化学	38
Introduction to Fisheries Science	水産科学概論	39
Practical Training	実地研修	40
Marine Biology	海洋生物学	41
Current topics of Agricultural Plant Science	先端植物生命科学	42
Introduction to Applied Animal and Dairy Science	応用動物・酪農科学概論	43
Food and Chemistry	食糧と化学	44
Current Topics of Shellfish Physiology	先端海洋生物生理学	45

Current Topics of Fish Ecology	先端海洋生物生態学	46
Current Topics of Marine Biotechnology (Current Topics of Fish Biochemistry)	先端海洋生物工学 (先端海洋生物化学)	47
Current Topics of Global Marine Ecology (Current Topics of Genetics in Aquatic Organisms)	先端地球海洋生態学 (先端海洋生物遺伝学)	48
Current Topics of Coastal Ecology	先端沿岸生態学	49
Current Topics of Fish Molecular Biology	先端海洋分子生物学	50
Current Topics of Plankton Biology	先端プランクトン学	51
Multidisciplinary Internship	学際インターンシップ	52
Science, Technology and Industry in Japan	日本の産業と科学技術	53

# Cooperative Innovation Program in Science, Engineering, and Agriculture

# for Leading Sustainable and Diverse Industry and Society by **Digital Globalization**

The FGL program has been selected by MEXT for a new program aimed at governmentsponsored students. As a result, starting in FY 2021, FGL will be able to accept 8 governmentsponsored students each year for three years. The objective of this program is to create an educational system based on cooperation between three undergraduate schools that will foster leaders in the field of global sustainable and diverse industry and society while driving innovation in university

Those who enter FGL as government sponsored students will also belong to this new program. Therefore, in addition to the curricula of their undergraduate schools, the government sponsored students will have to fulfill the requirements of this program as well. The program requirements (i.e. requirements for receiving government sponsorship) consist of nine or ten credits in the below six subjects. For details of each subject, please see the syllabus. (From 1. to 3. below are General Education subjects. In the above table, they are indicated by an asterisk (\*) to the right of the subject names.)

- 1. Study Abroad Program A [1 credits] General Education Subjects 2. Introduction to Academic Learning [2 credits] — General Education
- Subjects
- 3. Life and Nature (Study of Nature, Life and Technology) [2 credits] General Education Subjects
  4. Science, Technology, and Industry in Japan [1 credit] Specialized

- 5. Multidisciplinary Internship [1 credit] Specialized Subjects
  6. Digital Entrepreneurship Seminar [2 credits] General Education

# Biological productivity in aquatic zone and restoration from tsunami disaster

# 2. Object and summary of class

Onagawa Town was one of the most prosperous fishing ports in Japan. However, the 9.0- magnitude Tohoku-Pacific Ocean Earthquake generated a tsunami as high as 15 meters in Onagawa, which caused the town to subside by 1 meter, and completely destroyed its central area. The ria coast of Onagawa and coastal region along the Pacific Ocean had been severely stricken by the tsunami. Various coastal organisms have acclimated to tsunami perturbations and survived in the area. In order to promote reconstruction of tsunami-stricken areas such as Onagawa with respect to aquatic production (fish catching, aquaculture and fishery processing), it might be a promising measure to scientifically focus on the adaptability of coastal ecosystems in the area against tsunami perturbations, and to raise public awareness of the uniqueness of the costal ecosystems and biodiversity. This subject highlights tsunami damage and the circumstance of reconstruction in Onagawa Town including coastal ecosystems, and brings to understand the importance of constructing new relationship between natural biological productivity and human activity. Field lecture will be held on April in Onagawa Town with a two-day trip. Classroom lecture will be held on May or June at Aobayama Campus.

### 3. Keywords

marine biodiversity, fisheries, aquaculture, tsunami disaster, reconstruction,

# 4. Goal of study

At the end of the semester, students will

- -understand about tsunami disaster.
- -understand the importance of relationship between natural aquatic production and human activity.
- -understand sustainable biological productivity and the application to reconstruction of human society.
- 5. Contents and progress schedule of class
- Introduction to studies of marine science, biological productivity and restoration
- Field lecture about tsunami damage, the restoration of coastal ecosystems, and the circumstance of reconstruction in Onagawa Town (including Onagawa Field Center)
- Class room lecture
- Group discussion
- 6. Preparation

For more information, note our announcement in the curriculum guidance during the first week of April.

- 7. Record end evaluation method

### Ecosystems including forest, grassland, farmland, paddy field and biological productivity

2. Object and summary of class

The purpose of the course is to get understanding of agronomical thinking and sustainable biological productivity through 1 day filed trip, classroom lectures and discussion time. Field trip will be held in May and the destination is the Integrated Terrestrial Field Station (Kawatabi in Naruko area). Classroom lecture will be held in May and June.

3. Keywords

agronomical science, integrated terrestrial field, ecosystem, environmental issues, animal waste treatment, grasslands, farmlands, soil science, forestry

4. Goal of study

At the end of the semester, students will

- -experience about fundamental field science
- -understand agronomical thinking
- -understand sustainable biological productivity
- 5. Contents and progress schedule of class
  - 1-5. Introduction to Agronomical science (Profs. of Field Science Center)
- 6. Field lecture about forest ecosystem (Profs. of Forest Ecology)
- 7. Field lecture about farmlands on hilly and mountainous area (Profs. of Environmental Crop Science)
- 8. Field lecture about grasslands, farm animals and environmental issues (Profs. of Land Ecology)
- 9. Field lecture about animal waste treatment, biogas production and recycling system (Profs. of Sustainable Environmental Biology)
- 10. Field lecture about andosol (volcanic ash soil) and environmental issues on farmland (Profs. of Environmental Crop Science)
- 11. Field lecture about management of animal feeding and animal welfare (Profs. of Land Ecology)
- 12. Field observations for integrated terrestrial field (Profs. of Field Science Center)
- 13. Group discussion (Profs. of Field Science Center)
- 14. Class room lecture about agriculture and ecosystem (Profs. of Field Science Center)
- 15. Class room lecture about spatial science and agronomy (Profs. of Field Science and Technology for Society)

# 6. Preparation

Read books related on agronomy, soil science, animal science, forest science and environmental science before the field trip.

7. Record end evaluation method

Attendance and participation for field trip (40%)

Attendance and participation for classes (30%)

Report about field trip (30%)

8. Textbook and references

URL: http://www.agri.tohoku.ac.jp/kawatabi/index.html

9. Self study

Write a report after the field trip. Write down what did you see, what did you feel. We welcome your consideration based on the group discussion.

10. Practical business

### 11. In addition

Field trip will be held in May (Fri.), 8:00 - 18:30. Gathering Spot is Aobayama Campus (Faculty of Agriculture Building).

Please carry rain cape, protection against cold weather, insurance card and lunch to field trip.

E-mail address: chinatsu@tohoku.ac.jp

Subject	Modern Agriculture and Agricultural Science (現代における農と農学)	Day/Period	Fri./3 <sup>rd</sup>	Object	AMB
Instructor (Post)	K. Homma (Prof.) et al	Categories	Specialized Subjects	Preferable Participants	1st-year students
Position	Faculty of A amountains (Conducts School				
Position	Faculty of Agriculture (Graduate School	of Agricultur	al Science)	Semester	3
Subject Numbering	AAL-OAG203B			Language Used in Course	English/Japanese

# Grasp of problems according to water, foods, energy, biomaterials, environment and health

### 2. Object and summary of class

The purpose of the course is to let participants understand and grasp the many agricultural problems such as water, foods, energy, biomaterials, environment and health through the unique lecture with laboratory tours. Students can go to more than 30 laboratories (about 3/4 of all lab. of our faculty) in the course to know and understand the characteristics of each laboratory's state of education and research.

Students will increase knowledge step by step through explanation of stuffs and discussion with each other.

# 3. Keywords

### 4. Goal of study

At the end of the semester, students will

- -have basic knowledge about the agricultural science including the academic field of plant science, animal science, fishery science, agricultural chemistry, food science at present stage in our faculty.
- -have deeper understanding of the strategy for survival of humans in the future by utilizing the agriculture at high levels.

### 5. Contents and progress schedule of class

The education and research of our Faculty of Agriculture, and the Graduate School of Agricultural Science are operating in the six different fields of plant science, material environmental economy, applied animal science, marine bioscience, biochemistry and bioscience. In the lecture, we will explain the dairy situation in each laboratory including laboratory tours style.

Students will be separated into six groups and will take a lecture by stuffs of the lab. in the rotation system. Each student can visit one to four laboratories in one day.

- 1. Guidance "Introduction of agricultural sciences"
- 2-15. Visit to six courses of Plant Science, Resource Environmental Economics, Applied Animal Science, Applied Marine Biology, Biochemistry, and Biological Chemistry
- 16. Examination

### 6. Preparation

# 7. Record end evaluation method

Students must attend the laboratory tour more than 60% and take an examination (40%) of the last day.

### 8. Textbook and references

Textbook and references will be notified at the class.

### 9. Self study

### 10. Practical business

### 11. In addition

Students who have some questions can visit to ask to each laboratory until 18:00 after lecture time.

Contact persons will be notified at the class.

Contact: koki.homma.d6@tohoku.ac.jp

Subject	Introduction to Physiology and Ecology (生理•生態学概論)	Day/Period	Fri./2nd	Object	AMB
Instructor (Post)	Cheryl L Ames (Prof.)	Categories	Specialized Subjects	Preferable Participants	1st-year students
D = =:4: =	Escales of Assistant Care has Calcal	C A:141 (	g.:)	Credits	2
Position	osition Faculty of Agriculture (Graduate School of Agricultural Science)		Semester	2	
Subject Numbering	ABS-APS235E			Language Used in Course	English

Introduction to Physiology and Ecology: a general introduction to physiology and marine ecology.

### 2. Object and summary of class:

A beginner course in the basics of writing about marine physiology and ecology. Through reading, writing and presentations, students will gain broad basic knowledge of the functional organization of animals (e.g., evolution, nervous systems) with an emphasis on the marine realm.

### 3. Keywords:

Nervous system, hormones, life functions, evolution, biodiversity, marine ecosystems, marine resources

### 4. Goal of study:

Master the basics of physiology and ecology for future application to Applied Marine Biology specialist topics and courses.

- 5. Course contents and class schedule
- (1). Introduction. Basic principles of marine physiology, metabolism and ecology.
- (2) Marine animal biodiversity: bathymetric distribution of marine animals.
- (3) Phylogenetic and evolutionary adaptations of marine animals.
- (4) The nervous system. 1. Neuron structure & function.
- (5) The nervous system. 2. Sensory systems.
- (6) The endocrine system. Cell signaling and hormones.
- (7) Mid-term report and examination.
- (8) Harvesting Living Marine Resources
- (9) Estuaries
- (10) Coastal Seas
- (11) The Coral Reef Ecosystem
- (12) The Open Sea
- (13) The Deep-Sea Floor
- (14) Polar Seas
- (15) Final report, presentation and examination.

# 6. Preparation:

All students should complete weekly reading and writing assignments prior to each class. By identifying areas of difficulty, each student should aim to improve understanding of the course content.

### 7. Record and evaluation method:

Attendance and participation during lectures (25%); Reports/quizzes and end-of-term examination (75%)

### 8. Textbook and references:

Primary reading(s) (students can purchase or borrow a copy from campus library): Morrissey et al. (2018). Introduction to the Biology of Marine Life (Jones & Bartlett Includes Navigate 2 Advantage Access, 11th. ed.) ISBN-13: 978-1-284-09050-5. Secondary reading(s): Levinton, JS (2018). Marine Biology: Function, Biodiversity, Ecology (Oxford University Press 5th. ed.) ISBN-13: 978-0190625276; Moyes, C.D. & Schulte, P.M. (2016). Principles of Animal Physiology (Pearson, San Francisco, 3rd. ed.) ISBN-13: 978-0321838179.

# 9. Self-study:

There is much to learn about these topics. Students are encouraged to review their lecture notes soon after class. Each lecture will start with a discussion and/quiz of the previous lecture to ensure students have a fundamental grasp of the course content, which is required to pass the quizzes/examinations.

### 10. Practical business

11. In addition: This course covers a broad range of topics. Later courses will explore these topics more deeply. Questions should be addressed to the lecturer directly during or after lecture, or during office hours. ames.cheryl.lynn.a1@tohoku.ac.jp

Subject	An Introduction to Bioindustrial Information Processing (生物生産情報処理概論)	Day/Period	3rd Quarter Tues./1st-2nd	Object	AMB
Instructor (Post)	Y. Sakai (Associate Prof.)	Categories	Specialized Subjects	Preferable Participants	3rd-year students
D '4'	Frankraf Arabaltana (Carabata Calara)	- £ A:14	-1 C -!)	Credits	2
Position	Faculty of Agriculture (Graduate School	of Agricultur	al Science)	Semester	6
Subject Numbering	ABS-APS336E	Language Used in Course	English		

### Introduction to fundamentals of methods for processing biological sequence data

### 2. Object and summary of class

The first half deals with the methods for computing the similarity between two or more biological sequences, and the remaining half introduces various methods for other types of sequence processing.

### 3. Keywords

biological sequence, string, similarity, alignment, phylogenetic tree, gene mapping, short read assembly

### 4. Goal of study

The goal is to understand the theoretical background with respect to validity or limitation of computer processing of biological sequences.

### 5. Contents and progress schedule of class

- 1 Preliminaries
- 2 Similarity between sequences
- 3 Pairwise alignment (global alignment)
- 4 Pairwise alignment (local alignment and alignment with affine gap penalty)
- 5 Multiple alignment (star alignment)
- 6 Multiple alignment (progressive method)
- 7 Amino acid substitution matrix
- 8 BLAST
- 9 PSI-BLAST and HMM
- 10 Phylogenetic tree (ultra-metric tree and additive tree)
- 11 Phylogenetic tree (UPGMA and NJ method)
- 12 Gene mapping
- 13 Short read assembly (with reference sequence)
- 14 Short read assembly (de novo)
- 15 Suggested answers of the term paper

# 6. Preparation

Prepare for the next lesson by conducting a Web search on the topic words related to the lesson.

# 7. Record end evaluation method

Attendance: 20% Term paper: 80%

### 8. Textbook and references

Recommended book:

Dan Gusfield, "Algorithms on Strings, Trees, and Sequences", Cambridge University Press (1997)

# 9. Self study

Review the previous lesson using the handout.

### 10. Practical business

### 11. In addition

Office hours: 16:30-18:00 Mon-Wed, and Fri at Room E410

### Reading scientific papers in English

# 2. Object and summary of class

The purpose of the course is to let students understand the composition and critical reading of scientific paper.

### 3. Keywords

Critical reading, discussion

# 4. Goal of study

Students will

- have practical capability to read scientific paper in marine biology.
- have knowledge of technical terms on studying field of marine biology.

# 5. Contents and progress schedule of class

The course will be conducted by AMB laboratories.

- Students will take a class in each laboratory three to four times
- Scientific paper to read will be provided from each laboratory
- The format of a class follows an instruction of instructor of each laboratory

# 6. Preparation

Read the parts to be dealt in each class in advance.

# 7. Record end evaluation method

The academic achievement will be evaluated by attendance and understanding of class subject of each laboratory.

### 8. Textbook and references

Scientific paper to read will be provided by each laboratory in advance and students may be recommended to prepare well.

### 9. Self study

Read the related scientific articles in each field.

# 10. Practical business

### 11. In addition

Students may visit the instructor of each class anytime.

Subject	Physiology of Biological Resources (資源生物生理学)	Day/Period	2 <sup>nd</sup> quarter Thur./1 <sup>st</sup> ~2 <sup>nd</sup>	Object	AMB
Instructor (Post)	Cheryl L Ames (Prof.)	Categories	Specialized Subjects	Preferable Participants	2 <sup>nd</sup> -year students
D = =:4: =	Escales of Assistant Care has Calcal	C A:141 (	g_:)	Credits	2
Position	sition Faculty of Agriculture (Graduate School of Agricultural Science)			Semester	5
Subject Numbering	ABS-APS338E			Language Used in Course	English

- 1. Class subject: Physiology of Biological Resources
- 2. Object and summary of class: This course provides a fundamental overview of the physiological requirements permitting marine animals to exist and reproduce within a host of environments often differing from their internal states.
- 3. Keywords: Neuroendocrinology, sensory systems, repair, sexual reproduction.
- 4. Goal of study: Develop an understanding of the varied ways and means by which cells in a multicellular organism communicate to maintain the organism's integrity and ensure the production of a new generation. Develop a solid grasp of the concept of homeostasis and its application in neuroendocrine regulation, sensory perception, repair and sexual reproduction. Gain a practical understanding of the differences between phylogenetics of gene trees (amino acid sequences) in comparisons with species trees (nucleotide sequences).
- 5. Course contents and class schedule
- (1-4) Neurophysiology.

Neurophysiology and classification of chemical transmitters. Reception by target cells. Process of receptor cell receipt and information transmission. Action potentials. Origin of the nervous system. Neurons and support cells.

(5-7) Neuroendocrinology.

Hormones (e.g., thyroid hormone, growth hormone, and insulin), the organs and glands that secrete them, and their actions on different organ systems in the body.

- (8). Mid-term report and examination.
- (9-11). Sensory perception. Chemoreception, photoreception and mechanoreception. Comparisons between marine invertebrates and mammals. Sensory cells.
- (13-14). Endocrinology of reproduction. Sex hormones. Reproduction and determination of sex. Gonad structure and the development of gametes. Sex, reproduction and the environment. Control of sex and maturity, courtship, and spawning. Comparisons between marine invertebrates and mammals.
- (15). Final report, presentations, examination.
- 6. Preparation: All students should complete weekly reading and writing assignments prior to each class. By identifying areas of difficulty, each student should aim to improve understanding of the course content.
- 7. Record and evaluation method: Attendance and participation during lectures (25%); Reports/quizzes and end-of-term examination (75%)
- 8. Textbook and references: Primary reading(s) (students must purchase or borrow a copy from campus library): Moyes, C.D. & Schulte, P.M. (2015). Principles of Animal Physiology. # Relationships among organisms and those between organisms and their environment as fundamental factors supporting biological production in nature.

2. Object and summary of class

More than 1500 thousand of organisms are recognized to live on the earth now. These numerous organisms maintain various interrelationships with surrounding organisms and its environmental factors, which may support biological production in nature.

The present subject addresses fundamental concepts of ecology necessary to understand mechanisms of nature in each category of population, community, and ecosystem.

# 3. Keywords

biological production, population, biological community, marine ecosystem, environment, interspecific relations

4. Goal of study

Students can understand the structure and function of biological nature, and find an outline of the relationships between organisms and its environment.

- 5. Contents and progress schedule of class
- 1. Species (binomial nomenclature, reproductive isolating, crossbreed)
- 2. Classification (five kingdoms, three domains) Biological production in each ecological category: producer, consumer, decomposer.
- 3. Divergent evolution, natural selection
- 4. Adaptation, Speciation, & Diversity
- 5. Niche, fitness, food selection
- 6. Interspecific relationships (competition, predation etc.), Gause's Law
- 7. Population; definition, mode of life, population growth models, r-K strategy
- 8. Competition, strategy and tactics, game theory, Lotka-Volterra model
- 9. Concept of ecological niche, relationship between niche and competition
- 10. Community theory, ecological succession, climax
- 11. Structure and function of ecosystem,
- 12-13. Biogeochemistry (Element ratios, Element Cycling, Energy Flow and Matter Recycling)
- 14. Biological and physical cycle in nature
- 15. Ecosystem service

# 6. Preparation

Many books are published on ecosystem, environment, and bio-diversity, from which it is required to obtain various information about contemporary ecological problems.

7. Record end evaluation method

Evaluation will depend on achievement of final examination.

8. Textbook and references

MJ Kaiser et al. "Marine Ecology -Processes, Systems, and Impacts-", Oxford Univ. Press (2011)

M Begon et al. "Ecology: Individuals, Populations and Communities", Wiley-Blackwell (1996)

9. Self study

Students should have concern over topics on nature and organisms shown in various media and consider their biological and ecological meanings.

10. Practical business

### 11. In addition

Office hour for inquiry about the course should be offered any time at the Laboratory of Fisheries Biology and Ecology (E-311).

E-mail: skata@tohoku.ac.jp

Subject	Fish Genetics and Breeding science (水産遺伝育種学)	Day/Period	3rd Quarter Mon./3rd, 4th	Object	AMB
Instructor (Post)	M. Nakajima (Associate Prof.)	Categories	Specialized Subjects	Preferable Participants	2nd-year students
Position	Frankraf Arriveltura (Cardonte Calcal				
Position	Faculty of Agriculture (Graduate School	of Agricultur	ai science)	Semester	4
Subject Numbering	ABS-APS240E			Language Used in Course	English

Understand the basic theory of inheritance and the application methods for the genetic improvement in aquatic organisms.

### 2. Object and summary of class

In the aquatic organisms, not only genetics in individual level but also population level is important. Because, the position of conservation in genetic resources has very important in this subject. In this class, the basic theory of inheritance in individual level, population level, the basic theory of genetic improvement and the conservation of genetic resources will be explained and discussed.

### 3. Keywords

Genetic improvement, Genetic variation, Linkage, Genetic marker, Quantitative trait, Heritability, Breeding value, Heterosis, Recombinant DNA

# 4. Goal of study

- 1) Understand the basic theory of genetics in both of individual and population level
- 2) Understand the theory of the application methods of genetics for the genetic improvement
- Understand the basic theory of genetics for the conservation of genetic resources.

# 5. Contents and progress schedule of class

### Basic theory of inheritance

- 1) Basic theory and various mode of inheritance
- 2) Genetic variations
- 3) Linkage and recombination
- 4) Basic theory of genetics in population
- 5) Genetic drift and inbreeding
- 6) Natural selection
- 7) Population structure and genetic diversity of population
- 8) Genetic markers for the analysis of populations and quantitative traits

### Basic theory of genetic improvement

- 9) Basic theory of inheritance in quantitative traits
- 10) Heritability and breeding value
- 11) Basic theory of selection
- 12) Heterosis and hybrid vigor
- 13) Genetic improvement by recombinant DNA

# 6. Preparation

Please read a book about conservation and genetic improvement.

### 7. Record end evaluation method

Total results are evaluated by the final examination, reports and the results of the problems set at a lecture at each time.

### 8. Textbook and references

Introduction to quantitative genetics, D. S. Falconer, Longman Scientific & Technical, New York, 1989 Genetics for fish hatchery managers, D. Tave, An AVI Books, New York, 1992

Principles of population genetics, D. L. Hartl and A. G. Clark, Sinauer Associates, Inc., Massachusetts Conservation and the Genetics of Populations, F. W. Allendorf and G. Luikart, Blackwell Publishing, Oxford, 2007

# 9. Self study

Ask me the things which are not understood. Please do preparations for lecture and a review used text book shown to the above.

### 10. Practical business

### 11. In addition

The office will be opened from 10:00 AM to 05:00 PM to receive the question. The question is also received by e-mail, masamichi.nakajima.b6@tohoku.ac.jp

### Practical field and experimental training for marine biodiversity.

# 2. Object and summary of class

To understand importance of marine biodiversity.

- (1) Observation and analysis of marine biodiversity.
- (2) Analysis of genetic diversity in marine organisms.
- (3) Comparative observation of early development and morphogenesis of marine invertebrates.

# 3. Keywords

marine ecosystem, biodiversity, genetic diversity, early development, morphogenesis

### 4. Goal of study

Students will be able to understand the importance for biodiversity in marine ecosystems through the observation of species/genetic diversity and development of marine organisms.

5. Contents and progress schedule of class

# Five days in 4th semester (August)

- Days 1-2: Quantitative and qualitative of marine biodiversity.
- Days 3-4: Observation of early development of marine invertebrates.
- Day 5: Presentation

# Five days in 6<sup>rd</sup> semester (August)

- Days 1-2: Quantitative and qualitative of genetic diversity in marine organisms.
- Days 3-4: Observation of morphogenesis of marine invertebrates.
- Days 5: Presentation

### Morphology, function and components of aquatic organisms, analysis of substances in environment

### 2. Object and summary of class

The purpose of the course is to let participants understand the taxonomy, constitution of body, function of aquatic organisms, the way to use analytical instruments and analysis of experimental data.

### 3. Keywords

Experiments, anatomy, microscopy, chemical analysis, statistics

### 4. Goal of study

Students will

- have basic knowledge for anatomical structure and components of aquatic organisms and analysis of environment.
- have deeper understanding of aquatic organisms and marine environment.

# 5. Contents and progress schedule of class

The course will be conducted by AMB laboratories.

- Anatomy of invertebrate and teleost
- Molecular biology and genetics
- Taxonomy of aquatic organisms
- Histology
- Physiology
- Analytical chemistry of environment and organisms
- Microbiology
- Ecology
- Statistic analysis

### 6. Preparation

Understand the materials and methods to be used in each class in advance.

### 7. Record end evaluation method

Students should attend every experiments and absence is not acceptable for any reason. Students should submit report of each by the deadline suggested in each experiment. The academic achievement will be evaluated by attendance and submitted report through entire period.

# 8. Textbook and references

Text for the course will be provided and students may be recommended to prepare well.

### 9. Self study

Refer to related books in the library for writing reports.

### Components of aquatic organisms, analysis of substances in environment

### 2. Object and summary of class

The purpose of the course is for students to understand the body components of organisms and the procedures to extract and analyze chemical components in the environment.

### 3. Keywords

Experiments, analysis, biogenic substances, chemical components

### 4. Goal of study

Students will

- have basic knowledge of biogenic substances from aquatic organisms and analysis of the environment.
- have knowledge of experimental procedures.

### 5. Contents and progress schedule of class

The course will be conducted by AMB laboratories

- Anatomy of fin fish
- Extraction and analysis of genetic material
- Analysis of components of seawater
- Evaluation of taste components
- Extraction and analysis of body components

### 6. Preparation

Understand the materials and methods to be used in each class in advance.

### 7. Record end evaluation method

Students should attend every experiment and absence is not acceptable for any reason. Students should submit a report on each theme by the required deadline. Academic achievement will be evaluated by attendance and grading of all reports submitted .

### 8. Textbook and references

Texts for the course will be provided.

### 9. Self study

Refer to related books in the library for writing reports. Prepare well before attending each practical.

### 10. Practical business

# 11. In addition

Students may visit the instructor of each experiment any time.

### Body plan and function of aquatic organisms

### 2. Object and summary of class

The purpose of the course is to let students understand body plan and function of aquatic organisms studying on morphology, genetics, cell biology, physiology and statistic analysis.

### 3. Keywords

Morphology, Genetics, Taxonomy, Cellular tissue

### 4. Goal of study

Students will

- have knowledge of basic biology
- have knowledge of experimental procedure

# 5. Contents and progress schedule of class

The course will be conducted by AMB laboratories.

- Anatomy of fin fish
- Genetics and analysis of polymorphism
- Cell biology of aquatic plant
- Histology of marine animals

# 6. Preparation

Read textbook before the class and understand an outline of experimental procedure in advance.

### 7. Record end evaluation method

Students should attend every experiments and absence is not acceptable for any reason. Students should submit report of each by the deadline suggested in each experiment. The academic achievement will be evaluated by attendance and submitted report through entire period.

### 8. Textbook and references

Text for the course will be provided and students may be recommended to prepare well.

# 9. Self study

Review the results of the experiment and summarize it in the report.

# 10. Practical business

### 11. In addition

Students may visit the instructor of each experiment anytime.

Subject	Aquacultural Biology(水産増殖学)	Day/Period	2nd Quarter Fri./1st & 2nd	Object	AMB
Instructor (Post)	T. Unuma (Prof.)	Categories	Specialized Subjects	Preferable Participants	2nd-year students
Dogition	Fearly of Assigniture (Conducts School of	f A ami avaltavna l	Saionaa)	Credits	2

Subject Numbering	ABS-APS341E				English

### Underlying concept of aquaculture and overview of projects of representative aquaculture

### 2. Object and summary of class

Restoration of natural fishery resources and growth of fish products is an urgent issue to be resolved in aquaculture. The purpose of this class is to let students understand the concept of aquaculture and specific aquaculture projects.

### 3. Keywords

Teleost, Crustacea, Bivalve, Natural seed, Artificial seed

### 4. Goal of study

Students will

- cognize the importance of aquaculture for restoration and growth of fishery product.
- have knowledge of specific issues on aquaculture.

### 5. Contents and progress schedule of class

- Current state of world fisheries production
- Concept of aquaculture
- Salmon 1 (life cycle)
- Salmon 2 (artificial seed production and release)
- Yellowtail 1 (life cycle)
- Yellowtail 2 (natural seed collection and farming)
- Flounder 1 (life cycle)
- Flounder 2 (artificial seed production and release)
- Kuruma Prawn 1 (life cycle)
- Kuruma Prawn 2 (artificial seed production and farming)
- Scallop 1 (life cycle)
- Scallop 2 (natural seed collection and farming)
- Oyster (natural seed collection and farming)
- Others (Pearl oyster and Bluefin tuna cultivation)
- Chromosome manipulation and sex manipulation

# 6. Preparation

Read textbook and handout before the class and understand an outline of life cycle and aquaculture process of each animal in advance.

# 7. Record end evaluation method

The academic achievement will be evaluated by report assigned in each lecture.

### 8. Textbook and references

Modern methods of aquaculture in Japan Vol. 24, ed. by H. Ikenoue & T. Kafuku, Elsevier, 1992

# 9. Self study

Read again textbook based on the information learned at the class and review the knowledge of aquaculture.

### 10. Practical business

# 11. In addition

Students may visit the office or contact via Email (tatsuya.unuma.b8@tohoku.ac.jp) anytime.

URL of the lab "Aquacultural Biology"; http://www.agri.tohoku.ac.jp/zoshoku/english.html

Subject	Fisheries Biology and Ecology (水産資源生態学)	Day/Period	3 <sup>rd</sup> quarter Mon./1 <sup>st</sup> ~2 <sup>nd</sup>	Object	AMB
Instructor (Post)	S. Katayama (Prof.)	Categories	Specialized Subjects	Preferable Participants	3rd-year students

Position	Position Faculty of Agriculture (Graduate School of Agricultural Science)			Semester	6
Subject Numbering	ABS-APS342E	Language Used in Course	English		

Life history of marine resources, biology, population dynamics and methodology of population analysis.

### 2. Object and summary of class

Characteristics of marine organisms are tempo-spacio fluctuations and reproduction. Especially marine resources are affected by not only environmental condition but also fishing pressure. In this lecture, after short review of world and Japanese fisheries production, life history traits and fluctuating patterns of populations are explained. Methodology of stock assessment and population are also mentioned for the fisheries management.

# 3. Keywords

Fish biology, life history strategy, Fisheries, Population analysis

### 4. Goal of study

To understand the biological characteristics of marine resources and to learn theoretical and technical methods for marine biology, stock assessment and fisheries management.

- 5. Contents and progress schedule of class
- 1. Status of world and Japanese fisheries production
- 2. Stock identification and population structure
- 3. Ichthyology (External morphology and sense organs)
- 4. Ichthyology (Function of gill and feeding)
- 5. Life history (Spawning and annual cycle)
- 6. Life history (Migration)
- 7. Life history (Age and growth)
- 8. Life history (Early life history)
- 9. Life history (Maturation)
- 10. Population analysis (Survey method)
- 11. Population analysis (Delury method)
- 12. Population analysis (Yield per recruit model)
- 13. Population analysis (Cohort analysis)
- 14. Population analysis (MSY)
- 15. Fisheries management

### 6. Preparation

There are no particular prerequisites for this course. Basic biology capabilities will ease the learning.

7. Record end evaluation method

Score of an end-of-term exam and attendance

8. Textbook and references

Marine Fisheries Ecology, Jennings et al., 2001 Wiley-Blackwell

Fishes: An Introduction to Ichthyology, Moyle and Cech, 2004 Pearson Prentice Hall

Fisheries Biology, Assessment and Management, M. King, 2007 Wiley-Blackwell

9. Self study

Please do not lose teaching documents and your class note for the final exam.

- 10. Practical business
- 11. In addition

Office hour for inquiry about the course should be offered any time at the Laboratory of Fisheries Biology and Ecology (E-311).

### The ecology of giant kelp forests

### 2. Object and summary of class

This course provides the basic knowledge about the community ecology of marine kelps through the readings of some chapters related to the ecological topics in the book 'The biology and ecology of giant kelp forests' by Schiel & Foster (2015).

### 3. Keywords

Kelp forest, Sea urchin, Barren, Grazing, Population dynamics, Production, Rocky subtidal ecosystem, Phase shift Global warming

### 4. Goal of study

The goal is to understand the structure and function of marine kelp communities through the study of the ecology of giant kelp forests.

### 5. Contents and progress schedule of class

- (1) Introduction
- (2) The abiotic environment-1: Substratum and sedimentation
- (3) The abiotic environment-2: Temperature, light and nutrient
- (4) The abiotic environment-3: Water motion
- (5) Dispersal and connectivity of populations-1: Demography and metapopulations
- (6) Dispersal and connectivity of populations-2: Reproductive output and source of propagules
- (7) Dispersal and connectivity of populations-3: Spore dispersal and recruitment windows
- (8) Session review-1
- (9) Grazing in kelp communities-1: Kelp-sea urchin interactions
- (10) Grazing in kelp communities-2: Reversion of barrens to kelp habitat
- (11) Grazing in kelp communities-3: Other grazers in giant kelp communities
- (12) Predation and trophic cascades-1: Fish predation on grazers
- (13) Predation and trophic cascades-2: Lobster predation on grazers
- (14) Predation and trophic cascades-3: Sea otter predation on grazers
- (15) Session review-2

# 6. Preparation

Read the relevant chapters in the textbook in advance.

# 7. Record and evaluation method

Report and attendance

### Biochemical characterization of aquatic organisms and seafood

# 2. Object and summary of class

The organisms inhabiting in water have unique components to adapt to and survive in the environment. To understand their ways of life, it is essential to understand the chemical components of fish and other marine organisms. While marine organisms show beneficial effects on human health, some of them possess toxic substances and some microorganisms and parasites are responsible for food poisoning. The class deals with the biochemical, nutritional and functional properties of the components in the organisms and the mechanisms of development as well as adaptation to habitat environment. The other related topics will also be introduced.

### 3. Keywords

Aquatic organisms, chemical components, catabolic pathways, regulatory systems

# 4. Goal of study

To get the sufficient knowledge about the characteristics of marine organisms from a biochemical viewpoint. To understand the mechanisms to survive in water.

# 5. Contents and progress schedule of class

- 1: Biochemical characteristics of marine organisms
- 2: Metabolism
- 3: Proteins
- 4: Lipids
- 5: Carbohydrates
- 6: Vitamins
- 7: Minerals
- 8: Enzymes
- 9: Bioactive components
- 10: Physical aspects of life
- 11: Functional substances
- 12: Natural toxins and food poisoning
- 13: Osmoregulation
- 14: Final presentations
- 15: Final report

### 6. Preparation

Collect the related information in the library and through the web

### 7. Record end evaluation method

Based on the final report and presentations (50%), homework (20%) and class attendance (30%).

### 8. Textbook and references

Nelson & Cox: Lehninger Principles of Biochemistry 8th edition (2021)

# 9. Self study

Read related papers published in recent years.

Review marine environment and adaptive ecology of pelagic and benthic organisms that evolved in the oceans.

# 2. Object and summary of class

Deepen understanding of plankton, nekton, and benthos that live in vast and deep ocean environment based on physical and chemical characteristics of the ocean.

### 3. Keywords

marine environment, ecosystem, biology, ecology, productivity, plankton, nekton, benthos

### 4. Goal of study

Understand pelagic and benthic environments of the oceans and adaptation of their inhabitants, regional differences, and biological oceanographic basis that support fish and other upper-level production

- 5. Contents and progress schedule of class
- 1-2: History of Biological Oceanography
- 3-4: Physical environment
- 5-6: Chemical environment
- 7-9: Marine plankton
- 10: Nekton
- 11-13: Marine benthos
- 14: Marine ecosystems
- 15: Current topics on Biological Oceanography

### 6. Preparation

Acquire basic knowledge on oceans and organisms living in them.

# 7. Record end evaluation method term-end test

### 8. Textbook and references

Biological Oceanography: An Introduction, 2nd ed., Lalli and Parsons, 1997 Butterworth-Heinemann

### 9. Self study

### Conservation and sustainable yield of marine bio-resources

### 2. Object and summary of class

A variety of marine bio-resources have inhabited in the coastal areas. These are important food resources and also reproductive resources. Considering a conservation and sustainable yield of them, though ecological and physiological studies are important, genetic studies should be quite important for future.

In the present lecture, I will explain the importance of applied genetics for future managements of marine bio-resources by using actual scientific research in my laboratory.

# 3. Keywords

marine organisms, genetics and breeding science, population structure, conservation, aquaculture

# 4. Goal of study

Understanding the present condition of marine production in coastal area of Japan. Also, through the lecture, ability of consideration and problem solving are required.

- 5. Contents and progress schedule of class
  - 1. Introduction
  - 2. Extinction
  - 3. Quantification of Genetic Diversity (I)
  - 4. Quantification of Genetic Diversity (II)
  - 5. Quantification of Genetic Diversity (III)
  - 6. Quantification of Genetic Diversity (IV)
  - 7. Inbreeding & Outbreeding Depressions (I)
  - 8. Inbreeding & Outbreeding Depressions (I)
  - 9. Molecular Identification (VI)
  - 10. Conservation Units (I)
  - 11. Conservation Units (II)
  - 12. Conservation Units (III)
  - 13. Genetic Rescue
  - 14. Translocations
  - 15. Captive Breeding Program

### 6. Preparation

No need but you should survey the technical terms in the lecture and write on your note book.

# 7. Record end evaluation method

Subject	Aquatic Invertebrate Biology (水圏無脊椎動物学)	Day/Period	1 <sup>st</sup> quarter Fri./1 <sup>st</sup> ~2 <sup>nd</sup>	Object	AMB
Instructor (Post)	T. Unuma (Prof.)	Categories	Specialized Subjects	Preferable Participants	1 <sup>st</sup> year students
Position	Franks of Assimilton (Conducts Cale	-1 -£ A - ::14	1 C - : - · · · · )	Credits	2
Position	Faculty of Agriculture (Graduate Scho	oi oi Agricuii	tural Science)	Semester	3
Subject Numbering	ABS-APS348E			Language Used in Course	English

On the invertebrate animals distributed in aquatic environments, basic physiology, especially immunology and feeding behavior, digestive and circulatory systems and life history will be outlined.

### 2. Object and summary of class

To learn the innate immune systems in marine invertebrates involved in basic innate immune systems, molecular and cellular host defense and apoptosis of immune cells.

To learn trained immunity of aquatic invertebrates based on host-parasite coevolution.

To understand structures of digestive organs and feeding and digestive mechanisms of bivalve mollusks.

To understand structures of heart and vessels, and circulatory system of bivalve mollusks.

### 3. Keywords

Marine invertebrates, Bivalves, Oysters, Innate immunity, Bio defense, Digestive systems, Feeding systems

4. Goal of study

Understanding the basic sciences in relation to immunology, feeding behavior and life history of aquatic invertebrates

5. Contents and progress schedule of class

1st: Guidance

2nd: Feeding mechanisms of bivalve mollusks 1

3rd: Feeding mechanisms of bivalve mollusks 2

4th: Feeding mechanisms of bivalve mollusks 3

5th: Digestion and nutrition in bivalve mollusks 1

6th: Digestion and nutrition in bivalve mollusks 2

7th: Circulatory system of bivalve mollusks 1

8th: Circulatory system of bivalve mollusks 2

9th: A thorough review and first examination (Exam 1) of the class in the first half

10th: Innate Immunity in Invertebrates 1: general theory

11th: Innate Immunity in Invertebrates 2: morphology and function of hemocytes

12th: Innate Immunity in Invertebrates 3: pathogen recognition receptors (PRRs) and PAMPs

13th: Innate Immunity in Invertebrates 4: host defense in mollusks

14th: Innate Immunity in Invertebrates 5: host defense in crustaceans

15th: Innate Immunity in Invertebrates 6: trained immunity of mollusks: model for host-parasite coevolution

16th: A thorough review and second examination (Exam 2) of the class in the second half

# 6. Preparation

You should study basic biology, especially immunology and molluscan biology, prior to class studying.

7. Record end evaluation method

Attendance point: 300 points (20 points per one lecture time; 15 times)

Examination point: 200 points (100 points per one exam)

AA=90-100%; A=80-89%; B=70-79%; C=60-69%; D=below 60%

# Concepts and methods for the study of marine plant life

### 2. Object and summary of class

Marine algae are the major primary producers at the marine coastal areas, but most of us know little about them. Object of the class is to understand the concepts and methods for the study of marine plants such as algae and seagrasses. In this series of lectures, firstly, we will try to understand the basic characteristics of marine plants. Second, the patterns in the geographical and vertical distributions of marine algae will be discussed. Next, we will overview the studies on the population and community aspects of marine plants. Analytical methods of population dynamics and the details of plant-animal interactions will also be discussed. In addition, some topics in seaweed mariculture and marine pollution will be shown. Finally, monitoring methods of marine plant communities and the actual application of them will be introduced.

### 3. Keywords

seaweed, kelp, Sargassum, plant-animal interactions, grazers, herbivores

4. Goal of study

For students to be able to understand the basic ideas and methods for the study of marine plants.

- 5. Contents and progress schedule of class
- (1) At the beginning: all about WAKAME: Undaria pinnatifida
- (2) Geographical distribution of marine algae
- (3) Vertical distribution of marine algae: intertidal zone
- (4) Vertical distribution of marine algae: subtidal zone
- (5) Primary production of coastal marine plants
- (6) Population analysis of marine plants
- (7) Monitoring survey of marine plant communities
- (8) Dispersal ability of marine plants
- (9) Plant-animal interactions in benthic algae communities
- (10) Epiphytic animals and tsunami impacts
- (11) Grazing snails
- (12) Field experiments
- (13) Mariculture
- (14) Pollution
- (15) Session review
- 6. Preparation

### 7. Record and evaluation method

Attendance rates and test scores will be recorded and evaluated.

# 8. Textbook and references

Handouts will be available at the beginning of each lecture.

# 9. Self study

Review is required.

### The biochemical characteristics and effective utilization of marine bioresources

### 2. Object and summary of class

The biochemical characteristics of marine organisms as foodstuffs will be explained. The attendees are supposed to understand the principle of seafood production and the processing methods. Accurate knowledge of the hygienic control of fish and shellfish will also be dealt to understand the roles of marine organisms as resources for food. The functions of seafood for human health and the characteristics of seafood for medicinal and industrial materials will be also discussed.

### 3. Keywords

Food preservation, Freezing and thawing techniques, Postmortem changes of fish and shellfish

### 4. Goal of study

To be able to understand the principals and methods of food processing, preservation and the control of seafood qualities and to get the knowledge for the effective utilization of marine resources.

- 5. Contents and progress schedule of class
  - 1 Marine resources for food
  - 2 Characteristics and variation of seafood
  - 3 Nutritional aspects of seafood
- 4 Processing principals of typical seafood
- 5 Food poisonings related to seafood
- 6 Seafood allergy
- 7 Health-promoting functions of the substances from aquatic organisms
- 8 Biochemical substances from marine organisms for medicinal and industrial materials
- 9 Control of muscle protein quality
- 10 Report writing
- 11 Term-end exam

# 6. Preparation

Review the contents of the lectures on Marine Biochemistry

### 7. Record end evaluation method

The final grade will be calculated based on the mid-term reports (40%) and term-end examination (60%).

### 8. Textbook and references

Subject	Seafood management (水産食品管理学)	Day/Period	1st quarter Wed./1st~2nd	Object	AMB
Instructor (Post)	Cheryl L Ames (Prof.)	Categories	Specialized Subjects	Preferable Participants	3rd-year students
D = =:4: =	Faculty of Agriculture (Graduate School of Agricultural Science)			Credits	2
Position				Semester	7
Subject Numbering	ABS-APS351E	Language Used in Course	English		

- 1. Class subject: Seafood Management.
- 2. Object and summary of class: This dynamic course, the contents of which keep changing with fluctuating fisheries resources, instructs on the features of seafood quality and its management with regards to maintaining the safety of seafood.
- 3. Keywords: Hygiene, HACCP, diseases, food safety, pandemic, disasters, aquaculture, legal and international issues, traceability, sustainability Blue Economy
- 4. Goal of study: Develop a solid understanding of methods for ensuring quality and hygiene management of seafood at each step, from harvest to the consumer's table. Describe the features of seafood quality. State the methods of maintaining quality in terms of safety. State relevant regulations and public laws for maintaining seafood quality and safety. Describe the essential points of quality management under the HACCP system, and necessity of the FERAT system.
- 5. Course contents and class schedule.
- (1-2). Introduction. Seafood traceability, sustainability, Blue Economy. Seafood production and processing. FERAT: Fisheries Emergency Rapid Assessment Tool. Fisheries in light of natural disasters and pandemics.
- (3-4). Chemistry: Components of seafood affecting color, taste and smell. Harmful chemical (e.g., histamine, etc.) and physical substances (foreign objects) affecting food safety.
- (5-6). Harmful biological substances (1) Parasites. Bacterial & fungal infections, listeriosis, etc. Preservation of seafood products: Principles and methods. Fundamentals of hygienic practices.
- (7-8). Ecology of Wild-caught and Aquaculture Fisheries. Students produce an outline of his/her selected target seafood species for final project
- (9-10). Seafood management (1): Seafood handling regulations, legislation and public laws on seafood hygiene. Basic seafood handling: visit to Ishinomaki Fish Landing and Market\* or Sendai City Fish Market. \*
- (11-12). Seafood management (2): Prerequisites to HACCP (Hazard Analysis and Critical Control Point). Seafood management (3): The HACCP system. Visit to food processing company. \*
- (13-14). Class debate on sustainable options to replace vital but unsustainable fisheries
- (15). Final Presentations. Final Report Examination.
- \*In person or virtual.
- 6. Preparation: All students should complete weekly reading and writing assignments prior to each class. By identifying areas of difficulty, each student should aim to improve understanding of the course content.
- 7. Record end evaluation method: Attendance and participation during lectures (25%); Reports/quizzes and end-of-term examination (75%)
- 8. Textbook and references: Primary reading(s) (students can access all main material online):

# Systematics and biology of marine plankton

2. Object and summary of class

An introduction to systematics, physiology, and ecology of marine plankton

3. Keywords

Diatom, dinoflagellate, ciliate, copepod, krill, food chain, microbial food web, vertical migration

4. Goal of study

Understanding structure and role of plankton community in marine ecosystem

5. Contents and progress schedule of class

Marine ecological division (1)

Classification of marine plankton (1)

Characteristics of phytoplankton and zooplankton (2)

Food chain and food web in marine plankton (1)

Primary production by marine phytoplankton (1)

Material circulation (carbon and nitrogen cycles) (2)

Ecology and application of useful phytoplankton (2)

Ecology and biology of harmful phytoplankton (2)

Current topics in marine plankton (2)

Examination

### 6. Preparation

Basic knowledge of biology and ecology, basic understanding of marine ecosystem

7. Record and evaluation method

Presence/absence evaluation & examination

Subject	Marine Coastal Ecology (沿岸環境学)	Day/Period	1 <sup>st</sup> quarter Fri./1 <sup>st</sup> -2 <sup>nd</sup>	Object	AMB
Instructor (Post)	Toyonobu Fujii (Associate Prof.)	Categories	Specialized Subjects	Preferable Participants	2nd-year students
Position	Frankraf Arabaltana (Cardante Calcal	Credits	2		
Position	Faculty of Agriculture (Graduate School	of Agricultur	ai Science)	Semester	5
Subject Numbering	ABS-APS353E			Language Used in Course	English

The structure and functioning of marine coastal ecosystems and the impacts of human activities on them.

### 2. Object and summary of class

This class introduces the fundamentals of marine biology by examining the vibrant life in the oceans with particular reference to the coastal ecosystems. Students will study a range of coastal habitats including shelf seas, coral reefs, mangroves, estuaries and various shore types. This class covers a diverse set of topics ranging from structure and functioning of different coastal ecosystems, through adaptations of organisms for their particular living conditions, to issues relating to the sustainable management of marine coastal resources.

#### 3. Keywords

marine coastal ecosystems, community ecology, biogeography, conservation, anthropogenic influences, sustainable resource management

# 4. Goal of study

Students are expected to enhance their skills in marine ecological research methods, reading scientific articles, critical thinking, communication and scientific writing.

# 5. Contents and progress schedule of class:

- 1. Introduction
- 2. An Introduction to Marine and Coastal Ecosystems: A Global Perspective
- 3. Estuaries and Muddy, Sandy & Rocky Shores
- 4. Seagrass Meadows and Kelp Forests
- 5. Mangroves and Coral reefs
- 6. Coastal Fisheries and Aquaculture
- 7. Issues Surrounding Anthropogenic Impacts and Marine Coastal Management
- 8. Essay Writing Skills Session
- 9. Case Studies in the Onagawa Bay Coastal Ecosystem: (I) Physical Components
- 10. Case Studies in the Onagawa Bay Coastal Ecosystem: (II) Biological Components
- 11. Case Studies in the Onagawa Bay Coastal Ecosystem: (III) Anthropogenic Components
- 12. Case Studies in the Onagawa Bay Coastal Ecosystem: (IV) Socio-Ecological System Dynamics
- 13. Revision Session
- 14. Final Exam
- 15. Final Exam

# 6. Preparation

None

# 7. Record end evaluation method

Attendance: 10 %

Essay writing: 30 % (Review essay on contemporary topic relating to marine and coastal management (~1500 words))

Final Exam: 60 % (The exam will consist of essay style questions. You will be asked to attempt 2 questions from a choice of 5 questions (2 hours duration))

#### 8. Textbook and references

There is no dedicated textbook for this class. A list of key references will be provided in each lecture.

### 9. Self study

None

#### 10. In addition

Contact e-mail address: toyonobu.fujii.a8@tohoku.ac.jp

Subject	Marine Applied Biochemistry (海洋応用生物化学)	Day/Period	Intensive Course	Object	AMB

Development of nutritional and functional substances from marine bioresource

# 2. Object and summary of class

It has been established that habit of eating fish is beneficial for maintaining and promoting human health. In this class, students are supposed to learn the developmental strategies, function evaluation methods, and marketing of the nutritional and functional substances from marine organisms. They are also requested to understand the developmental steps for food for specified health use (FoSHU) by referring to the commercially available goods.

#### 3. Keywords

Marine bioresource, functional substances, healthy food, FoSHU, pharmaceuticals

# 4. Goal of study

To understand the chemical structures, pharmaceutical effects, and preparation methods of the nutritional and functional substances in marine organisms and further the strategies for industrial applications.

- 5. Contents and progress schedule of class
- 1 Development of nutritional and functional substances from marine bioresource (overview)
- 2 Development of EHA preparation (including development of FoSHU and pharmaceuticals)
- 3 Development of DHA preparation (including development of FoSHU)
- 4 Squalene and squalane
- 5 Chondroitin sulfate
- 6 Chitin, chitosan and glucosamine
- 7 Other substances: fish collagen, ether lipids, astaxanthin, zinc, DNA, etc.

Further details of this subject will be announced later.

# 6. Preparation

Not necessary

# 7. Record end evaluation method Based on the evaluation of reports

#### 8. Textbook and references

None

# 9. Self study

Collection of the latest information from newspaper, internet, etc. Checking commercially available goods

# 10. In addition

Subject	Introduction to Fisheries Science (水産科学概論)	Day/Period	Fri./2nd	Object	AMB/JYPE
Instructor (Post)	M. Ikeda (Prof.) et al.	Categories	Specialized Subjects	Preferable Participants	2nd-year & JYPE students
Position	Faculty of A microltone (Conducto School	af A ami assitssmal	Coiomaa)	Credits	2

# **Introduction to Fisheries Science**

2. Object and summary of class

This course provides an overview of fisheries science. Students will learn the fundamentals of fisheries science as it relates broadly to marine biology, from molecules to ecosystems.

3. Keywords

Fisheries science, fundamentals, overview

4. Goal of study

The goal is to understand the fundamentals of fisheries science from ecology, physiology, genetics, molecular biology and evolution, and to appreciate fisheries science as it relates to applied marine biology.

5. Contents and progress schedule of class

# Topics on marine ecology and oceanography

- 1. "The ecology of floating seaweeds" (M. Aoki)
- 2. "Distributional pattern of seaweeds" (H. Suzuki)
- 3. "How to know the fish age" (S. Katayama)
- 4. "How to know the fish migration" (S. Katayama)
- 5. "Benthos adapted to marine environments" (W. Sato-Okoshi)
- 6. "Coastal ecosystem dynamics and fisheries resources" (T. Fujii)
- 7. "Plankton in the ocean" (G. Nishitani)

# Topics on physiology, biochemistry and genetics of aquatic organisms

- 8. "Immunity in marine invertebrates" (T. Unuma)
- 9. "Manipulation of reproduction in bivalve mollusks" (T. Unuma)
- 10. "Food chemistry of fish and shellfish" (T. Nakano)
- 11. "Probiotics and bioactive substances in fish" (T. Nakano)
- 12. "Genetic conservation and sustainable use of resources in aquatic organisms" (M. Nakajima)
- 13. "Biological sequence comparison methods" (Y. Sakai)
- 14. "Evolution and fisheries resources" (M. Ikeda)
- 15. "Molecular phylogenetics: Tools and applications" (C. Ames)

#### 6. Preparation

Refer to recent topics in each field.

7. Record end evaluation method

Attendance and paper. Papers in which the contents of each lecture are organized should be directly submitted to the "Classroom" by the next lecture. The final report should be submitted within a week of the final lecture.

8. Textbook and references

No textbook. References (books, articles, videos) will be provided

9. Self-study

Summarize the content of each class promptly.

10. Practical business

11. In addition

Questions, comments, and requests should be sent to the representative instructor,

Prof. Ikeda: minoru.ikeda.a6@tohoku.ac.jp

# Practical training at the points of fishery production and research

2. Object and summary of class

This course provides the tours at the point of fishery production and research. Students will learn fisheries science practically.

3. Keywords

Field trip, investigative tour

4. Goal of study

The goal is to increase awareness of students to learn fisheries science.

5. Contents and progress schedule of class

This course provides the practical tours as below:

- 1. Aquaculture facility
- 2. Research institute of fishery
- 3. Seafood company
- 4. Fish market
- 5. Wildlife sanctuary etc.

# 6. Preparation

Collect information before starting each tour.

7. Record and evaluation method

Attendance and report.

The report should be submitted by the designated deadlines.

8. Textbook and references

No textbook. Reference books will be introduced by each professor.

9. Self study

Refer to related books in the library after each tour.

10. Practical business

11. In addition

Questions, comments, and requests are welcome.

Send them to the representative instructor, Prof. Ikeda: minoru.ikeda.a6@tohoku.ac.jp

Subject	Marine Biology(海洋生物学)	Day/Period	4 <sup>th</sup> quarter Thu./1 <sup>st</sup> ~2 <sup>nd</sup>	Object	AMB
Instructor (Post)	Cheryl L Ames (Prof.)	Categories	Specialized Subjects	Preferable Participants	2nd-year students
Position	Fearly of A amountains (Conducte School	of A ani aultumal	Saisman)	Credits	2
Position	Faculty of Agriculture (Graduate School	oi Agriculturai	Science)	Semester	4
Subject Numberin g	n ABS-APS257E			Language Used in Course	English

- 1. Class subject: Marine Biology: Systematics, biodiversity, phylogenetics, habitats and ecological niches of marine organisms.
- 2. Object and summary of class: Survey the different types of organisms in the sea in order to develop a fundamental understanding of marine biodiversity. Assess the effects of natural and anthropogenic disturbances on marine ecosystems and their inhabitants. Develop an understanding of Metazoa evolution and molecular phylogenetics.
- 3. Keywords: Marine Biodiversity, Plankton, Evolution, Phylogenetics, Systematics, Ecology
- 4. Goal of study: Develop an understanding of the main categories of marine animals (Metazoa), become familiar with the basic body plans and distinguishing features against the background of evolution, ecology and systematics.
- 5. Contents and progress schedule of class
- Each lecture will provide an overview of the fundamentals of different groups of marine organisms. Students will gain an understanding of the field of systematics and dynamics of molecular phylogenetics. Practical components may be incorporated through "virtual" class excursions to public museums and aquariums.
- (1-2). Introduction. Marine organisms and the food web; producers, consumers, detritivores; the major groups & their spatial and bathymetric distributions; solar-dependent and solar-independent (hydrothermal) systems.
- (3-4). Marine animal (Metazoa) taxonomy, systematics and phylogenetics. Basic body plans (diploblasts versus triploblasts) and evo-devo (evolution of development). Evolution of the nervous system.
- (5-6). Marine Invertebrates (non-bilaterians). Zooplanktonic forms.
- (7-8). Bilateria. Deuterostomia and Protostomia. Chordata. Chaetognath, Urochordata, Cephalochordate. Hemichordate.
- (9-10). Mid-term report and exam. Basics of fish systematics. Gnathostomes. Agnatha.
- (11-12). Basics of fish systematics. Chondrichthyes. Osteichthyes.
- (13-14). Marine mammals. Systematics. Comparison with closest relatives
- (15). Final report, presentations and exam.
- 6. Preparation: All students should complete weekly reading and writing assignments prior to each class. By identifying areas of difficulty, each student should aim to improve understanding of the course content.
- 7. Record and evaluation method: Attendance and participation during lectures (25%); Reports/quizzes and end-of-term examination (75%)
- 8. Textbook and references: Primary reading(s) (students can purchase or borrow a copy from campus library): Morrissey et al. (2018). Introduction to the Biology of Marine Life (Jones & Bartlett Includes Navigate 2 Advantage Access, 11th. ed.) ISBN-13: 978-1-284-09050-5. Secondary reading(s): Levinton, JS (2018). Marine Biology: Function, Biodiversity, Ecology (Oxford University Press 5th. ed.) ISBN-13: 978-0190625276; Helfman, G et al. (2009). The Diversity of Fishes: Biology, Evolution, and Ecology (Wiley-Blackwell, 2nd. ed) ISBN-13: 978-1405124942. Brusca et al. (2016). The Invertebrates: A Synthesis (Sinauer Associates, 3rd. ed) ISBN-13: 978-1605353753.
- 9. Self-study: There is much to learn about these topics. Students are encouraged to review their lecture notes soon after class. Each lecture will start with a discussion and/quiz of the previous lecture to ensure students have a fundamental grasp of the course content, which is required to pass the quizzes/examinations.
- 10. Practical business: Student projects will contribute to the Tree of Life project.
- 11. In addition: Questions should be addressed to the lecturer directly during or after lecture, or during office hours. ames.cheryl.lynn.al@tohoku.ac.jp \*Taxa not covered during this course will be address in the courses *Life & Nature*, *Planktonology* and in *Basic Seminars*.

Subject	Current topics of Agricultural Plant Science (先端植物生命科学)	Day/Period	1 <sup>st</sup> quarter Wed./3 <sup>rd</sup> ~4 <sup>th</sup>	Object	AMB/JYPE
Instructor (Post)	Y. Kanayama (Prof.) et al.	Categories	Specialized Subjects	Preferable Participants	3rd & 4th-year & AMB students
Position	E	-1 -£ A:1	1 C - : )	Credits	2

Subject Numbering	ABS-PLA358E	Language Used in Course	English		

# Professors and associate professors in Course of Plant Science introduce current topics of agricultural plant science.

2. Object and summary of class

The purpose of this class is to enhance students' interests on crop science, horticultural science, soil science, plant pathology, plant breeding and genetics, insect science and bioregulation, environmental plant biotechnology, environmental crop science and forest ecology.

# 3. Keywords

Crop, Plant, Soil, Insect, Microorganisms.

4. Goal of study

The goal of this course is for students to understand and broaden the knowledge of agricultural plant science, and to have great interests in our studies on plant production science, environmental plant biotechnology, and applied plant science. Students will want to study in our course of Graduate School of Agricultural Science.

5. Contents and progress schedule of class

Each week there will be lectures and discussions of the following topics:

1) Introduction (Prof. Kanayama)

Horticultural science: Functional properties of fruit and vegetable crops (Assoc. Prof. Kato)

- 2) Crop science-1: Climate change impact on crop production (Prof. Homma)
- 3) Crop science-2: Crop physiology and production (Assoc. Prof. Kameoka)
- 4) Plant pathology-1: Virus infection and plant immune system (Prof. Takahashi)
- 5) Plant pathology-2: Variety of plant pathogens and plant immunity (Assoc. Prof. Ando)
- 6) Plant breeding and genetics-1: Nanohana-Project (Prof. Kitashiba)
- 7) Plant breeding and genetics-2: Molecular mechanism of self-incompatibility (Assoc. Prof. Yamamoto)
- 8) Soil science: Soil science on the risk alleviation methods for heavy metal contamination in soil and rice (Prof. Makino)
  - 9) Applied Entomology (Prof. Hori)
  - 10) Environmental plant biotechnology-1: Introduction of genetically modified plants (Prof. Toriyama)
  - 11) Environmental plant biotechnology-2: Genetics and genetic engineering of plants (Assoc. Prof. Ito)
  - 12) Environmental crop science-1: Soil management and productivity (Prof. Nishida)
- 13) Environmental crop science-2: Role of plant roots in crop production and environmental impacts (Assoc. Prof. Taiima)
  - 14) Forest ecology-1: Forest molecular ecology (Prof. Suyama)
  - 15) Forest ecology-2: Forest microbial ecology (Assoc. Prof. Fukasawa)

#### 6. Preparation

Briefly understand each field on the website below.

7. Record end evaluation method

Attendance (30%), class participation (30%), and report (40%).

8. Textbook and references

http://www.agri.tohoku.ac.jp/en/about/organization/faculty/index.html

Self study

Study the above website in detail and understand the contents of research in each field. If you want to study in more detail, ask each faculty for reference books.

Subject	Introduction to Applied Animal and Dairy Science (応用動物・酪農科学概論)	Day/Period	1 <sup>st</sup> quarter Fri./3 <sup>rd</sup> ~4 <sup>th</sup>	Object	AMB/JYPE
Instructor (Post)	Tomonori Nochi et al.	Categories	Specialized Subjects	Preferable Participants	3rd&4th-year students
Position	Faculty of Agriculture (Graduate Scho	al of Agricult	ural Sajanaa)	Credits	2
FOSITION	raculty of Agriculture (Graduate Scho	Semester	7 and 9		
Subject Numbering	ABS-ANS360E			Language Used in Course	English

# 1. Class subject Introduction to Applied Animal and Dairy Science

# 2. Object and summary of class:

This class object is to study the basic concepts of applied animal and dairy science. More than ten Professors and Associate Professors will give the lectures weekly to introduce their specific research fields.

3. Keywords

Animal science, Dairy science

4. Goal of study

The goal of this class is to obtain the background knowledge about animal and dairy science including comparative physiology, anatomy, nutrition, genetics, reproduction, animal product, immunology, microbiology, environment biology, and animal behavior.

- 5. Contents and progress schedule of class:
- 1) Overview of Animal Reproduction (Assoc. Prof. Kenshiro Hara)

Major interest is to elucidate the physiological mechanism controlling reproduction and development in mammals and to develop biotechnology in reproduction of domestic, laboratory and endangered animals.

2) Overview of Animal Nutrition (Prof. Kan Sato)

Introduction to metabolism of protein, fat and carbohydrate in farm animals. In addition, we introduce molecular and mitochondrial nutrition to improve animal products in dairy cows and chickens.

3) Overview of Animal Breeding and Genetics (Prof. Masahiro Sato, Assoc. Prof. Yoshinobu Uemoto)

For the genetic improvement of economically important traits in livestock population, the concepts of animal breeding theory with quantitative genetics and genomic information are studied.

4) Overview of Animal Physiology (Prof. Sanggun Roh)

Our research area offers the new information about the basic principles of animal physiology and their applications, in order to investigate the molecular mechanism of the endocrine and metabolic systems in the ruminant.

5) Overview of Animal Functional Morphology (Prof. Tomonori Nochi)

Learn about the molecular and cellular mechanisms of lymphoid tissue development by understanding the interrelationships between cellular function and tissue structure in the immune system.

6) Overview of Animal Microbiology (Assoc. Prof. Ryuta Tobe)

Our laboratory is interested in bacterial genetic engineering, bacterial flora and zoonotic diseases. Our goal of research and education is the production of healthy animals including humans.

7) Overview of Animal Food Science (Prof. Haruki Kitazawa)

Basic and application studies on probiotic/immunobiotic lactic acid bacteria to produce physiologically functional foods and feeds will be introduced, and their future prospects will also be discussed.

8) Overview of Grazing Management (Prof. Shin-ichiro Ogura, Assoc. Prof. Michiru Fukasawa)

Grazing systems have various functions on animal production and ecological conservation. We introduce the outline of herbivore grazing and refer to its effects on animal welfare and bio-diversity.

9) Overview of Animal Health and Management (Prof. Kentaro Kato, Assoc. Prof. Chika Tada)

Zoonotic microorganisms and pathogenic microorganisms in the environment of the animal production as well as functional microorganisms in animal waste treatment systems are studied.

6. Preparation

NO need

- 7. Record end evaluation method Attendance to the lectures 50%, reports 50%
- 8. Textbook and references We will introduce in each category of class.
- 9. Self study
- 10. Practical business
- 11. In addition

Subject	Food and Chemistry (食糧と化学)	Day/Period	1 <sup>st</sup> quarter Thur./3 <sup>rd</sup> ~4 <sup>th</sup>	Object	AMB/JYPE

1. Class subject: Biochemistry and chemistry of food and bioactive natural products

- 2. Object and summary of class: This class object is to study the basic concepts of biochemistry and chemistry of food and related bioactive natural products. More than ten Professors and Associate Professors will give the lectures weekly to introduce their specific research fields.
  - 3. Keywords:
- 4. Goal of study: The goal of this class is to obtain the background knowledge concerning biochemistry and chemistry as well as the basic principles of food science and natural products chemistry.
  - 5. Contents and progress schedule of class:
  - 1. Food allergens: why certain types of proteins contained in foods act as allergens? (Prof. Masako TODA) Biochemical and immunological properties of food allergens that induce food allergies will be introduced.
  - 2. Novel functions of dietary vitamins and its contribution to our health.(Prof. Hitoshi SHIRAKAWA)

This lecture will focus on physiological roles of vitamins in food, and also will mention about the recent knowledge of their functions for health maintenance.

3. Food and bioactive natural products for human health (Prof. Kiyotaka NAKAGAWA)

This lecture will give you basic understanding of the roles of food and bioactive natural products to prevent against ageing and oxidative damages (e.g., dementia, cancers, atherosclerosis). This lecture will also address the development of food for human health.

- 4. Beneficial health effects of dietary lipids (Assoc. Prof. Takahiro EITSUKA)
- Lipids play important roles in the function of our body in both health and disease. This lecture will provide basic knowledge of health functions of dietary lipids and their mechanisms of action.
- 5. Chemistry and biochemistry of marine toxins I (**Prof. Mari YAMASHITA**)

Some of the marine animals contain highly toxic compounds which could cause food intoxication. Isolation, structural determination, analytical methods and pharmacology of these compounds will be presented.

6. Chemistry and biochemistry of marine toxins II (Assoc. Prof. Keiichi KONOKI)

Isolation, structural determination, analytical methods and pharmacology of marine toxins will be presented. (This lecture is the second part of lecture about the marine toxins.)

7. Application of high pressure to food processing. (**Prof. Tomoyuki FUJII**)

High pressure technique is one of non-thermal processing of food. In this lecture, the quality of the pressurized food will be discussed from the viewpoint of the high pressure effect on food structure.

- 8. Protein chemistry (**Prof. Yoshikazu TANAKA**)
  To understand function of protein, determining its 3D structure is of significance. In this lecture, basic principle of 3D structure determination is introduced. The practical experiment will be carried out as well.
  - 9. Bioactive molecules and their application for drug discovery (**Prof. Minoru ISHIKAWA**)

There are many biologically active compounds in natural products. This lecture will focus on bioactive compounds in human health, their target molecules, and applications for drug discovery and medicinal chemistry.

10. Medicinal chemistry of antibacterial and antiviral agents (Prof. Hirokazu ARIMOTO)

Selected topics in anti-infective agents will be discussed with an emphasis on how organic chemistry is used in the drug development process.

11. Synthetic and medicinal chemistry of marine natural products (Prof. Makoto SASAKI)

Marine natural products that display important biological activities with remarkable potency and specificity are known to be useful for understanding/regulating biological events. This lecture will give an overview of the synthetic and medicinal chemistry of some important marine natural products.

- 12. Nutrient-inspired biomaterials and its applications for the health purpose (**Assoc. Prof. Taiki MIYAZAWA**) There are different types of nutrients in nature, which have a variety of different biological activities and physical properties. The challenge of biomaterials, composed primarily of these properties, is one of the important topics for human health. The basic outline and application of this research area are introduced in this lecture.
  - 13. Lecture is given by Assoc. Prof. appointed in 2024
  - 14. Lecture is given by Assoc. Prof. appointed in 2024
  - 6. Preparation:
  - 7. Record and evaluation method: Attendance to the lectures 50%, reports 50%
  - 8. Textbook and references: Textbook and references will be introduced by each professor.
  - 9. Self study: Read textbooks and references to advance knowledge about related topics
  - 10. In addition: For inquiry, please contact Prof. Minoru Ishikawa: minoru.ishikawa.e4@tohoku.ac.jp

# Recent research topics in aquatic animal physiology

2. Object and summary of class

Studies on aquatic animal physiology have contributed to not only aquaculture production, but also fundamental biology. In this course, some recent findings in aquatic animal physiology (mainly germ cell biology and neuroendocrinology) will be introduced.

3. Keywords

Germ cells, Reproduction, Neuropeptides, Fish, Shellfish

4. Goal of study

Learning recent findings, scientific interests with science impact, and further application.

- 5. Contents and progress schedule of class
- 1. Germ cell biology in aquatic animals 1 (germ cell classification)
- 2. Germ cell biology in aquatic animals 2 (germline stem cell)
- 3. Germ cell biology in aquatic animals 1 (germ cell transplantation 1)
- 4. Germ cell biology in aquatic animals 2 (germ cell transplantation 2)
- 5. Neuroendocrinology in aquatic animals 1
- 6. Neuroendocrinology in aquatic animals 2
- 7. Discussion and follow up
- 6. Preparation

No need.

7. Record end evaluation method

Evaluation is based on class attendance and quiz after each class.

8. Textbook and references

Handouts will be provided.

9. Self study

Review the handouts.

Current topics of Fish Ecology

# 2. Object and summary of class

This course covers the fish ecology and fish biodiversity in the marine ecosystem, using environmental DNA.

#### 3. Keywords

Environmental DNA, Fish Ecology, Climate change, Marine ecosystem

# 4. Goal of study

Through this course, students will be able to understand fish ecology and the methods for ecological study, environmental DNA in particular.

- 5. Contents and progress schedule of class
- 1 Overview of fish ecology
- 2 The methods for ecological study
- 3 What is environmental DNA (eDNA)?
- 4 eDNA metabarcoding for biodiversity monitoring
- 5 Species-specific methods of eDNA for biomass estimation
- 6 Application of eDNA for ecosystem conservation
- 7 Application of eDNA for fisheries management

# 6. Preparation

No need.

# 7. Record and evaluation method

Attendance and participation during lectures (10%), assignments (30%), and reports (60%)

# 8. Textbook and references

Miya, M. (2022). Environmental DNA metabarcoding: a novel method for biodiversity monitoring of marine fish communities. Annual review of marine science, 14, 161-185.

Techniques of molecular biology and marine biotechnology, genome editing

# 2. Object and summary of class

Students will learn about developmental biology of fish, molecular engineering in fish, and bioinformatics using computer and web sites.

# 3. Keywords

Fish development, genome, genome editing, positional cloning, bioinformatics

#### 4. Goal of study

Students will understand the basic mechanisms and strategy of genetic engineering and genomics in fish, and bioinformatics necessary for future researches in the fields of marine biotechnology.

- 5. Contents and progress schedule of class
- 1: Reverse genetics (Knockout fish, CRISPR/Cas9)
- 2: Forward genetics (Mutant library, Positional cloning)
- 3: Other basic techniques essential for fish biotechnology
- 4: Fish genomes
- 5: Practical training using computer (BLAST search, Multiple alignment, Phylogenetic tree, Ensembl, PubMed)
- 6: Larval and metamorphic development
- 7: Transgenic fish

# 6. Preparation

TBA (Preparation will be notified at the class)

#### 7. Record end evaluation method

Attendance, participation and test/report

# 8. Textbook and references

Subject Numbering	ABS-APS366E			Language Used in Course	English

The structure and functioning of large marine ecosystems and the impacts of global environmental change on them.

# 2. Object and summary of class

This class synthesizes the core concepts of marine ecosystem dynamics in relation to global environmental change and human impact. Students will go over a range of large marine habitats including coastal waters, polar regions, open oceans, and deep-sea environments. This class covers a diverse set of topics ranging from structure and functioning of different large marine ecosystems, through adaptations of organisms for their particular living conditions, to issues relating to the sustainable environmental management.

# 3. Keywords

Marine ecosystems, coastal waters, polar regions, deep-sea environments, community ecology, biogeography, adaptation, conservation, anthropogenic influences, environmental management

# 4. Goal of study

Students are expected to enhance their skills in marine ecological research methods, reading scientific articles, critical thinking, communication and scientific writing.

- 5. Contents and progress schedule of class
- 1 An Introduction to Large Marine Ecosystems: A Global Perspective
- 2 Coastal Waters
- 3 Deep Sea Environments I
- 4 Deep Sea Environments II
- 5 Hydrothermal Vents and Polar Regions
- 6 Issues Surrounding Global Environmental Change and Human Impact on Marine Ecosystems
- 7 Oral Presentation Session

# 6. Preparation

None

# 7. Record end evaluation method

Attendance: 10 %

Oral presentation: 30 % (10-minute oral presentations will take place during the final lecture session) Essay writing: 60 % (Review essay on contemporary topic relating to marine conservation (~1500 words))

# 8. Textbook and references

There is no dedicated textbook for this class. A list of key references will be provided in each lecture.

# 9. Self study

None

# **Ecology of temperate reef communities.**

2. Object and summary of class

Some current topics in ecology of temperate reef communities will be introduced.

3. Keywords

seaweed, kelp bed, canopy-forming algae, turf algae, herbivore, sea urchin

4. Goal of study

To learn the factors affecting the complex networks in temperate reef communities.

- 5. Contents and progress schedule of class
  - 1) Introduction
  - 2) Introduction of recently published papers-1
  - 3) Introduction of recently published papers-2
  - 4) Introduction of recently published papers-3
  - 5) Introduction of recently published papers-4
  - 6) Introduction of recently published papers-5
  - 7) Review

6. Preparation

Study relevant papers in advance.

7. Record end evaluation method

Report and attendance

8. Textbook and references

Recent papers are given within class.

9. Self study

Review is required.

Subject Numbering	ABS-APS368E			Language Used in Course	English

# Fish Molecular Biology -- Fish as a Model System

### 2. Object and summary of class

In recent decades, fish became more and more used as excellent model system to investigate fundamental questions not only in aquaculture, but also in basic biology, medicine, and environmental science. This class will discuss why they are favored and how the model system developed, by showing examples of fish and other animals used as experimental model system.

#### 3. Keywords

Experimental model animal, genetics, developmental biology, non-conventional model animal

#### 4. Goal of study

Students will understand the potential of fish and the reason why fish are used as an excellent experimental model in various fields. Some of learned strategies would be helpful for students to design their own research projects in any fields.

- 5. Contents and progress schedule of class
- 1. Introduction: Molecular biology as a tool for the research in biology and medicine
- 2. Advantage of nematode and fly as model system: development, genetics and mutagenesis
- 3. Advantage of fish as a model system: developmental genetics, genomics and mutagenesis
- 4. Advantage of frog and chicken as model system: development and micro-surgery
- 5. Advantage of mouse as a model system: development and stem cell technology
- 6. Advantage of using multiple model system: comparative approach and evolutionary biology
- 7. Experimental model system: past, present and future
- 8. Summary and final exam

#### 6. Preparation

Review the previous classes. Please feel free to ask during the class, if you have any ambiguous points.

# 7. Record end evaluation method

Attendance, participation, quiz and final exam.

# 8. Textbook and references

Developmental biology (Scott F Gilbert)

Others will be introduced in the class.

#### 9. Self study

Take a look at the Nature or Science magazine to see how model organisms are used in the latest biological research, and read some of the articles if you find them interesting.

#### 10. Practical business

# 11. In addition

Office hours, 10:00 to 18:00, Monday to Friday, please make an appointment beforehand.

Subject	Current topics of Plankton Biology (先端プランクトン学)	Day/Period	1 <sup>st</sup> quarter Tue./1 <sup>st</sup> ~2 <sup>nd</sup>	Object	AMB
Instructor (Post)	G. Nishitani (Asso. Prof.)	Categories	Specialized Subjects	Preferable Participants	3rd-year students
Position Fa	Faculty of Agriculture (Graduate School of Agricultural Science)			Credits	1
				Semester	7
Subject Numbering	ABS-APS369E		Language Used in Course	English	

# Molecular Ecology and utilization of plankton

# 2. Object and summary of class

Plankton is a very small organism and its morphology cannot be observed without using a microscope. However, plankton is one of the most important components and significantly contributes to the marine ecosystem. In this class, several researches on utilization of plankton and its ecology using the latest molecular techniques will be introduced.

#### 3. Keywords

Phytoplankton, Useful and harmful species, Molecular ecology

# 4. Goal of study

Students will learn that molecular methods are effective and are important tools for plankton research. Moreover, students will also understand the utilization of plankton for industry and human health.

5. Contents and progress schedule of class

Useful microalgae (phytoplankton) (2)

Harmful microalgae (2)

Research introduction (2)

Examination

# 6. Preparation

Understand an outline of each topic in advance

# 7. Record end evaluation method

Attendance and examination

# 8. Textbook and references

All handouts will be given within class

9. Self study

Introduction of Japanese fisheries and aquaculture productions and seafood processing

# 2. Object and summary of class

Japan is well-known for fisheries and aquaculture production. The objective of the class is for international students to gain an understanding of fisheries production systems. Students taking this course will take interests in the traditional and recent art and technologies of fisheries, aquaculture, distributing, processing and eating fish and shellfish in Japan.

# 3. Keywords

# 4. Goal of study Students will

- learn about the distribution system for raw marine organisms landed at the fish market.
- understand operations of the seafood processing industry.
- discover Japanese excellent techniques of fish aquaculture and its seedling production.

# 5. Contents and progress schedule of class

This class will consist of two site visits. Each half-day visit will take place at a fishery site in Miyagi Prefecture. (Two field trips on Saturdays of June.)

- 1. The tour to a factory of a representative company of sasa-kama (one of the delicacies in Sendai area) is scheduled to learn about the processing steps of kamaboko (salt-ground and heated fish paste products).
- 2. This field trip to the community in Matsushima where is renowned for a wealth of marine resources (oysters and seaweed aquaculture) will focus on the aquaculture industry, paying particular attention to the community notions of sustainability, in an attempt to understand some of the challenges faced by the coastal community amid climate change and disaster recovery.
- Please select the two topics that you are most interested in and submit your impressions as a report by Aug.
   12th.

# 6. Preparation

# 7. Record end evaluation method Attendance and reports

- 8. Textbook and references
- 9. Self study

# Syllabus of "Science, Technology, and Industry in Japan" in Fall 2023

(SB4792, TB14141, ABG3041)

Time & Classroom: Tuesday 4th period (14:40-16:10), in A204\*

Most of the classes will be conducted in person in the classroom above.

Google Classroom: "2023 Science, Technology, and Industry in Japan (for 3 FGL

undergraduate courses)"

Meeting ID: 980 4449 8012

Passcode: 492448

<u>Course coordinator</u>: Yumiko Watanabe (<u>yumiko.watanabe.a5@tohoku.ac.jp</u>) at Global Learning Center.

Office: "GLC6" in the International Exchange Building (A12 on the Kawauchi campus map)

Course Title: Science, Technology, and Industry in Japan

<u>Course Subject</u>: The past, present, and future of industry, science, and technology and their relationships and integration in Japan

Language: English

# Aim and outline:

This specialized subject course (**one credit**) is a multidisciplinary course that has been organized by the faculties of science, engineering, and agriculture since 2016. Except for the first class, each class will feature a lecture by a specialist in his field. The topic of each lecture will be related to the science, technology, and industry, and their relationships in Japan and the globe". The topics also include issues and efforts in specific fields of industry to implement the 17 SDGs (Sustainable Development Goals) announced by the United Nations in 2016.

Students will learn how science, technology, and industry in different fields were integrated and developed, and how they contributed, contribute, and will contribute to our society with different cultures, and in diverse circumstances.

MEXT scholarship students in FGL courses are expected to apply what they learn from this course in another course titled "Multidisciplinary Internship" which will be offered in the spring/summer of 2024.

<u>Goal</u>: The goal of this course is to give students a multidisciplinary perspective and open-minded attitude in a diverse group of people with different cultural and academic backgrounds.

# Schedule of the course

#1 Guidance will be given by Y. Watanabe at GLC on October 3, 2023.

#2-8 lectures by guest speakers will be given as listed in the table below.

#3 lecture by Dr. Ebina on October 31 starts at 16: 20.

Oct. 3	渡邉由美子 (Yumiko WATANABE)	東北大学・GLC
Oct. 10	山田 幹也氏 (Mikiya YAMADA)	(株)みずほ証券 (Mizuho Securities)
Oct. 17	佐藤 實氏 (Minoru SATO)	東北大学名誉教授・(株)スマートハンドレッド Emeritus Professor at Tohoku University ・COE of Smar100
Oct. 24	野田 智之氏 (Tomoyuki NODA)	(株) 国際電気通信基礎技術研究所 (ATR: Advanced Telecommunications Research Institute International)
Oct. 31 (16:20)	蛯名 武雄氏 (Takeo EBINA)	(国研) 産業技術総合研究所 (AIST: Advanced Industrial Science & Tech.)
Nov. 7	藤森 俊郎氏 (Toshiro FUJIMORI)	(株)IHI (IHI, Corp.)
Nov. 14	富田二三彦氏 (Fumihiko TOMITA)	(国研) 情報通信研究機構 (NICT: Info. & Comm. Tech.)
Nov. 21	佐藤 陽一氏 (Yoichi SATO)	(株)理研食品 (Riken Food)

#### Evaluation method:

❖ Attendance, active participation during the class including the submission of a short essay on each lecture (70%)

The length of the short essay is expected to be approximately one A4 page ( $\sim$ 500 words) using 12-point 'Times New Roman font. You may want to write what you learned from the lectures and the situation of the lecture topic in your home country.

Please save your file with a name including your **student ID** and the **date** of the class **in "docx" or "doc" format**. This rule applies to the final report as well.

```
C2SBxxxxDATE (e.g., 1010 for DATE of October 10)
C2TBxxxxDATE
C2ABxxxxDATE
```

The deadline for submitting an essay to the classroom is **noon (JST) every next Monday after the class**.

❖ Submit an essay (~1,000 – 1,200 words) about the most important matter in achieving sustainable development in your home country or any specific region in the globe you learned from this series of lectures. (30%)

The deadline for this report is **noon (JST) on Wednesday, December 20, 2023.** 

Note: Late submission of an essay and a summary may result in a lower score on your work. A long delay (more than 1 week) without a reasonable reason will be considered to be a failure of the submission, and no scores will be given.

Misc.: If you cannot attend a class for any reason, please email the coordinator of this course (<a href="mailto:yumiko.watanabe.a5@tohoku.ac.jp">yumiko.watanabe.a5@tohoku.ac.jp</a>) as soon as you know you will be absent.
